Numerical Methods in Computational Electrodynamics Ursula van Rienen, 2012-12-06 treated in more detail They are just specimen of larger classes of schemes Essentially we have to distinguish between semi analytical methods discretization methods and lumped circuit models The semi analytical methods and the discretization methods start directly from Maxwell's equations Semi analytical methods are concentrated on the analytical level They use a computer only to evaluate expressions and to solve resulting linear algebraic problems The best known semi analytical methods are the mode matching method which is described in subsection 2.1 the method of integral equations and the method of moments In the method of integral equations the given boundary value problem is transformed into an integral equation with the aid of a suitable Green's function In the method of moments which includes the mode matching method as a special case the solution function is represented by a linear combination of appropriately weighted basis functions The treatment of complex geometrical structures is very difficult for these methods or only possible after geometric simplifications In the method of integral equations the Green's function has to satisfy the boundary conditions In the mode matching method it must be possible to decompose the domain into subdomains in which the problem can be solved analytically thus allowing to find the basis

functions Nevertheless there are some applications for which the semi analytic methods are the best suited solution methods For example an application from accelerator physics used the mode matching technique see subsection 5.4
