Frazzica,Wilhelm Kirch,2008-09-23 One important reason for the multitude of research activities in this field is because physical inactivity and nutrition are significant risk factors for many common non communicable diseases During the past decades physical inactivity and high dietary fat intakes have become increasingly prevalent in people's daily lives in industrialised countries To prevent and to tackle these major diseases there is a need for a much better understanding of the basic biological and underlying patho physiological processes as well as more relevant baseline data describing food intakes and physical activity habits amongst the general population Being aware of the importance of

nutrition and physical activity for health status a multitude of projects with different scopes and methodologies has arisen This variety makes it necessary to bring the results of these activities into a coordinated framework
