Nutritional Toxicology V3:

Nutritional Toxicology V3 John Hathcock, 2012-12-02 Nutritional Toxicology Volume III is a compilation of reviews and research regarding nutrition and toxicology specifically the issues that affect public health and regulation. This volume further develops understanding of the basic concepts significant to protect and promote public health and provide a credible scientific basis for public health and regulatory decisions. Composed of seven chapters, this volume further extends the discussion of the topics included in Volume I and Volume II of this series. The first two chapters deal with the topic of food safety. The first one discusses safety of food packaging materials and their health implications. The second chapter tackles the relation between neurotoxicology and food safety assessment. The next section of this book includes more detailed discussion regarding proteins, amino acids, phosphorylated derivatives, and vitamin B6 interactions. The discussion of these topics generally covers their chemical aspects, metabolism, bioavailability, and distribution in foods. The last two chapters give recommendations regarding toxicological experiments and vitamin supplement. Chapter 6 presents considerations in the designing of standardized diets in toxicological experiments. Chapter 7 gives an analysis of the risk/benefit of vitamin supplements. As with the other volumes, this book proves helpful to students, professionals, and researchers in the field of nutritional sciences, pharmacology, and biology.

Nutritional Toxicology V1 John Hathcock, 2012-12-02 Nutritional Toxicology Volume I is a sample result that has risen from the need for increased toxicological awareness and understanding by nutritionists and other professionals concerned with food production, utilization, and health. This book aims to collate significant information regarding nutrition-associated toxicity problems. The book is divided into 13 chapters. The first two chapters deal with a general overview of nutritional toxicology. Some of the topics discussed in this section include the nutritional effects of toxicants, xenobiotics, toxic action, and biotransformation. The following subject areas discussed include vitamin excess and toxicity, trace elements, and cardiovascular disease, and factors affecting the metabolism of nonessential metals in food. The subsequent chapters focus on problem areas including the hazards of foodborne bacterial infections and intoxications, mycotoxins, and toxic stress, metabolites, environmental contaminants in food, and hazards of compounds in human nutrition. The last section tackles the close relationship of toxicology with food, including their effects and applications. Some topics include food colors, ingredients, chemicals, and substances as well as their effects on other organisms. This volume will be invaluable to students and professionals in nutrition and toxicology. Other people who study nutrition, toxicology, and pharmacology will also benefit from this resource.
