The Best American Infographics 2013 Gareth Cook, 2013 The newest volume fresh and visually arresting in the acclaimed Best American series showcasing the finest examples of data visualization from the past year Rethinking Value-Added Models in Education Audrey Amrein-Beardsley, 2014-04-24 Since passage of the No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways

Garlen, Lisa Farley, 2021-05-14 What is a child The concept of childhood is so familiar that we tend to assume its universality However the meaning of childhood is always being negotiated not only by the imaginations of adults but also by nations markets history and children themselves Yet as much as the question is considered by the social world the contributions in this book remind readers that children are also active embodied and inquiring agents engaged in figuring a relationship with that the world they inherit This book s unifying theme The child in question emerges from an assertion that childhood has boundaries far more elastic than can be held by the familiar notion of the innocent child developing toward a heteronormative future The title pays homage to the work of sociologist Diana Gittins who over twenty years ago asked how the shifting meanings of children and childhood impact the lives of children The contributions of this book examine contemporary educational policy and practice curriculum material literary and visual representations and teacher narratives to further probe how and why it matters that childhood as a concept and experience remains as multiple

and elusive as ever The chapters in this book were originally published as a special issue of the journal Curriculum Inquiry

Left Behind Edward P. St. John, 2015-11-30 This book argues that American cities have been engaged for the past three decades in a radical but failing effort to transform general and vocational high schools into college preparatory institutions By examining the educational reforms in four urban charter schools across the United States and four public high schools in New York City it reveals how educators contend with the challenge of developing new courses while providing social support for students to build college going cultures Executive Function and Education Mariëtte Huizinga, Dieter Baeyens, Jacob A. Burack, 2018-09-21 Executive function is an umbrella term for various cognitive processes that are central to goal directed behavior thoughts and emotions These processes are especially important in novel or demanding situations which require a rapid and flexible adjustment of behavior to the changing demands of the environment The development of executive function relies on the maturation of associated brain regions as well as on stimulation in the child's social contexts especially the home and school Over the past decade the term executive function has become a buzzword in the field of education as both researchers and educators underscore the importance of skills like goal setting planning and organizing in academic success Accordingly in initiating this Research Topic and eBook our goal was to provide a forum for state of the art theoretical and empirical work on this that both facilitates communication among researchers from diverse fields and provides a theoretically sound source of information for educators The contributors to this volume who hail from several different countries in Europe and North America have certainly accomplished this goal in their nuanced and cutting edge depictions of the complex links among various executive function components and educational success **Failure** Vicki E. Alger, 2016-07-01 A comprehensive account and frank assessment of federal involvement in education is long overdue Education policy expert Vicki E Alger remedies this deficiency with her book Failure The Federal Miseducation of America's Children As its title indicates Failure makes no effort to sugar coat its findings Created in 1979 after a lobbying campaign that spanned generations the Department of Education has failed to live up to its promises Federal involvement whether related to testing funding or academic curricula has failed to abide by the Constitution's implication that education must remain the domain only of state and local governments and private institutions Most of all the central government's pervasive meddling in education has failed America's school children and their parents Education policy has long been mired in controversies often with opposing sides missing the mark Failure helps us step back from the skirmish du jour and redirects our focus to the big picture showing us what's gone wrong over the decades and the institutional causes of these failures It also offers a bold blueprint for returning the federal government to its constitutional role and for cultivating an educational system that meets the needs of students and parents rather than bureaucrats Concerned citizens of every stripe will benefit from Failure's history of federal education policy its brutally honest report card for the Department of Education its look at education systems across the globe and its ambitious policy recommendations Failure might even succeed in

reframing the way the federal education establishment thinks about education policy Math In Plain English Amy Benjamin, 2013-10-02 Do word problems and math vocabulary confuse students in your mathematics classes Do simple keywords like value and portion seem to mislead them Many words that students already know can have a different meaning in mathematics To grasp that difference students need to connect English literacy skills to math Successful students speak read write and listen to each other so they can understand retain and apply mathematics concepts This book explains how to use 10 classroom ready literacy strategies in concert with your mathematics instruction You ll learn how to develop students who are able to explain to themselves and communicate to others what problems mean and how to attack them Embedding these strategies in your instruction will help your students gain the literacy skills required to achieve the eight Common Core State Standards for Mathematics You ll discover the best answer to their question When am I ever going to use this The 10 Strategies 1 Teaching mathematical words explicitly 2 Teaching academic words implicitly 3 Reinforcing reading comprehension skills that apply to mathematics 4 Teaching mathematics with metaphor and gesture 5 Unlocking the meaning of word problems 6 Teaching note taking skills for mathematics 7 Using language based formative assessment in mathematics 8 Connecting memorization to meaning in mathematics 9 Incorporating writing to learn activities in mathematics 10 Preparing students for algebraic thinking Psychological Studies in the Teaching, Learning and Assessment of Mathematics Yiming Cao, Zsolt Lavicza, Shuhua An, Lianchun Dong, 2024-05-31 There is no doubt that the onset of a new decade has brought high expectations of academic progress for scholars especially for researchers in mathematics education The International Group for the Psychology of Mathematics Education was born in 1976 which focused on the international exchange of knowledge in the psychology of mathematics education the promotion of interdisciplinary research with psychologists mathematicians and mathematics teachers and the development of the psychological aspects of teaching and learning mathematics and its implications *The Language of Mathematics* Patrick M. Language, Cognition and Gender Alan Garnham, Jane Oakhill, Lisa von Stockhausen, Sabine Sczesny, 2016-08-08 Gender inequality remains an issue of high relevance and controversy in society Previous research shows that language contributes to gender inequality in various ways Gender related information is transmitted through formal and semantic features of language such as the grammatical category of gender through gender related connotations of role names e g manager secretary and through customs of denoting social groups with derogatory vs neutral names Both as a formal system and as a means of communication language passively reflects culture specific social conditions In active use it can also be used to express and potentially perpetuate those conditions The questions addressed in the contributions to this Frontiers Special Topic include how languages shape the cognitive representations of gender how features of languages correspond with gender equality in different societies how language contributes to social behaviour towards the sexes how gender equality can be promoted through strategies for gender fair language use These questions are explored both developmentally across the life span from childhood to old age and in adults The contributions present work conducted across a wide range of languages including some studies that make cross linguistic comparisons Among the contributors are both cognitive and social psychologists and linguists all with an excellent research standing The studies employ a wide range of empirical methods from surveys to electro physiology The papers in the Special Topic present a wide range of complimentary studies which will make a substantial contribution to understanding in this important area

Students at Risk of School Failure José Jesús Gázquez, José Carlos Núñez, 2018-10-18 The main objective of this Research Topic is to determine the conditions that place students at risk of school failure identifying student and context variables In spite of the fact that there is currently little doubt about how one learns and how to teach in some countries of the developed world there is still there is a high rate of school failure Although the term school failure is a very complex construct insofar as its causes consequences and development from the field of educational psychology the construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school failure School engagement builds on the anatomy of the students involvement in school and describes their feelings behaviors and thoughts about their school experiences So engagement is an important component of students school experience with a close relationship to achievement and school failure Children who self set academic goals attend school regularly and on time behave well in class complete their homework and study at home are likely to interact adequately with the school social and physical environments and perform well in school In contrast children who miss school are more likely to display disruptive behaviors in class miss homework frequently exhibit violent behaviors on the playground fail subjects be retained and if the behaviors

persist quit school Moreover engagement should also be considered as an important school outcome eliciting more or less supportive reactions from educators For example children who display school engaged behaviors are likely to receive motivational and instructional support from their teachers The opposite may also be true But what makes student engage more or less The relevant literature indicates that personal variables e g sensory motor neurodevelopmental cognitive motivational emotional behavior problems learning difficulties addictions social and or cultural variables e g negative family conditions child abuse cultural deprivation ethnic conditions immigration or school variables e g coexistence at school bullying cyberbullying may concurrently hinder engagement preventing the student from acquiring the learnings in the same conditions as the rest of the classmates Woodcock-Johnson IV Nancy Mather,Lynne E. valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
