

Activity A: Proton-proton chain	Get the Gizmo ready: - Click Reset. - Be sure Proton-proton is selected in the Reaction menu.	 Proton  Neutron
--	--	---

Introduction: All stars turn hydrogen into helium in a process called **nuclear fusion**. Stars perform this process in different ways. In stars like our sun, the **proton-proton chain** is used. This reaction requires temperatures greater than 4,000,000 K to occur.

Question: How does the process of fusion turn hydrogen into helium in stars?

1. **Observe:** Click **Fire proton** and observe. What happens after the proton merges into the nucleus? A gamma is released

This is a form of nuclear decay called **positron emission**. During positron emission, a proton decays into a neutron. In this process, it emits a **positron**, which is a nearly massless antimatter particle with a positive charge.

2. **Observe:** Click **Reset** and click **Fire proton**. Observe what happens. Many subatomic particles appear frequently in nuclear reactions. Their element symbols are given below:

(Neutrinos

0	
0	ν

 are also produced but are beyond the scope of this Gizmo.)

Click **Reset** and click **Fire proton**. Turn on the **Write equation** checkbox. Based on what you have observed, write in the equation for this reaction in the Gizmo and below.

1/0 n to 0/1 e+ plus 1/1 H

- A. Turn on **Show equation**. Was your predicted equation correct? yes

Correct your equation if necessary. The resulting H-2 isotope is called **deuterium**.

- B. Emitted energy is reported in megaelectron volts (MeV), where one MeV is equal to one million **electron volts**. How much energy is emitted in this reaction? 1.44 MeV

(Activity A continued on next page)
