Behaviors of Bimrocks Wang Yu, 2021-04-28 This book is intended as a reference book for advanced graduate students and research engineers in block in matrix rocks bimrocks or soil and rock mixtures SRMs or rock and soil aggregate RSA Bimrocks are complex formations characterized by competent rock inclusions floating in a weaker matrix Typical types of bimrocks include a series of mixed geological or engineering masses such as manges fault rocks coarse pyroclastic rocks breccias sheared serpentines and waste dump mixture Bimrock is especially different from the general soil and rock material and the detection of the damage and fracture is still wide open to innovative research Globally there is a widespread interest

in investigating the geomechanical behaviors of bimrocks such as deformation and strength characteristics damage and fracture evolution and stability prediction of bimrock construction However the meso structural factors control the whole mechanical properties of bimrocks the source of the macroscopic deformation phenomenon is the meso structural changes Therefore evaluation of the mesoscopic physical and mechanical properties together with advanced testing technique is an attractive research topic in rock mechanics As a result comprehensive macroscopic and mesoscopic experimental investigations should be conducted to reveal the damage and fracturing mechanical behaviors of bimrocks The readers of this work can gain new insights into the meso structural changes of bimrocks subjected to different stress paths This book is expected to improve the understanding of the mesoscopic damage and fracturing mechanisms of bimrocks and can be helpful to predict the stability of rock structures where rock mass is subjected to complex loading conditions

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world: correspondence rather than in terms of conformity to content-free norms of coherence e.g. transitivity.
