

NURSING ESSAY EXAMPLE

THE WORK OF NURSES IN THE CHILD AND ADOLESCENT PSYCHIATRY

Therapeutic goals of children and adolescents in the Day Hospital are, above all, better socialization, which means gaining the various skills, knowledge, motives and attitudes needed to carry out the present and future roles in the family, school and society. A child is primarily taught and directed towards behaviors that are acceptable to the society to which he belongs. Attention is focused on adapting the child to the environment, and changing attitudes that most often lead to conflicts. Conflicts are often the cause of bad socialization among peers, but also disrupted dynamics in family relationships. It often slows down a good therapeutic effect and hampers the baby's recovery faster. Children are encouraged to initiate, spontaneity and intense communication. Creative programs define the needs of each individual in order to improve the quality of everyday life, which contributes significantly to the prevention of isolation and stigmatization. The day hospital offers an alternative 24-hour hospitalization. The structured daily hospital program provides diagnostics, treatment and rehabilitation. Our experience suggests that most parents are happy to accept this type of treatment. First of all because the so-called trauma of separating children, but also the trauma of separating a child from a parent. It is important that the family first and foremost support both the child and the team in the team with the aim of speeding up the recovery of the child. We encourage family to cooperate and often through conversations with them, we notice certain behaviors that can slow or accelerate the healing of small patients. Psychiatric treatment at the Dental Hospital does not only imply medical treatment but includes a number of programs aimed at improving the health status and quality of life of children.
