

Synthesis of Information for Nursing Practice

Topic: Health & Medicine | Words: 1947 | Pages: 7

Clinicians can improve their practices by embracing the new technology and the use of art and science in their operations. Most of the issues that affect nurses have their solutions in the literature, but practitioners rarely invest in the acquisition of information from written literature to inform their practice. On the other hand, synthesizing information from liberal art and science to stimulate critical thinking and improve nursing practice is not easy. One of the areas that nurses lack critical information is in handling cardiac arrest patients. Resuscitation is usually the first aid given to help cardiac arrest patients. However, most of the cardiac arrest survivors end up losing the normal functioning of the other parts of their body (Boltz, 2012). The ability to understand various dangers of cardiac arrest and resuscitation to the patient is one of the major accomplishments and professional growth I achieved in this review. Research indicates that there are safer ways to handle cardiac arrest patients without endangering their lives. The information is available, but it takes the commitment of the nurse to synthesize and understand various aspects of patient care. For instance, to avoid brain damage in cardiac arrest patients, one should make use of a three-step procedure. Induction, maintenance, and re-warming are the three key steps to improving the performance and the health of cardiac arrest patients (Boltz, 2012). The information helps me offer quality services to cardiac arrest patients in my practice.
