

Wound Assessment Tool

MEASURE – A guideline for wound assessment.

M	Measurement of the wound	Provides baseline data even if the incision line is well approximated. Measure the length of the incision and width of the approximated edge. Length is always the longest dimension, width is determined at the widest point 90° from length and if the wound is open, depth is the deepest part to the edge of the skin. Always chart. Length x width x depth in cm.
E	Exudate quality and amount Describe volume as a percentage of saturation on the dressing. (this makes it measurable.)	Colour, amount, consistency and odour (if present). Drainage from surgical wound should diminish within three to four days. Signs of increasing bio burden may include increased serous exudate; purulent drainage; colour change from clear serous to opaque yellow; odour.
A	Appearance of wound bed Again, describe in terms of percentage of visible tissue. (E.g. 70% granular and 30% slough.)	Tissue in the wound bed: quality, type and amount; epithelial tissue; granulation tissue; and presence of slough or necrotic tissue. Make note if tendon, muscle, or bone is visible.
S	Suffering	Complete a pain assessment; note type, quality and degree of pain. Use a pain assessment tool (PQRSTU). Offer analgesic prior to dressing change.
U	Undermining	Identify whether there is tunneling or Undermining, and measure the amount. Describe the location of the undermining as you would a clock. (E.g. 4 cm tunnel at 4 o'clock) (The patients head is 12 o'clock)
R	Re-evaluate	Too-frequent assessment may lead to inappropriate changes in the treatment plan, while infrequent assessment may miss significant deterioration. Always recheck your dressing after applying. It may be as simple as it was not secured and is falling off, or if there is any breakthrough on the cover dressing. With optimum wound healing You can expect 30% reduction in size in 3 weeks.
E	Exudate	Edge of the wound • Asses the edge (gaps in the suture line). if dehiscence occurs. Description of the peri-wound tissues should include colour, temperature and presence/location of edema or induration. Induration along both sides of the suture line may be expected, and may be a healing ridge.

This is an open abdominal post-surgical wound. Measuring 18 cm x 4.0 cm x 4.5 cm deep. Wound bed is 98% clean and pale pink, no visible granulation tissue present. Muscle is visible in the deepest part of wound.

Remember these best practice principles...

- Fluff don't stuff the wound
- Use one piece of packing where possible
- Don't forget the "whole person, not the hole in the person"
- Optimize nutrition
- If the factors that contributed to the wound are not resolved , healing will not take place.

Nursing Wound Care Guidelines

Pamela Brown

Nursing Wound Care Guidelines:

Fast Facts for Wound Care Nursing Zelia Kifer, 2011-10-20 This book is a user friendly real world guide to assessing and managing any type of wound The author presents vital information for nurses and nursing students who provide wound care in any setting a wonderful resource for nurses The AORN Journal Association of Perioperative Registered Nurses Wound care is arguably the single most difficult topic in medicine It has no defined solution like insulin for the diabetic no easy strategy that covers all wounds we are so tremendously blessed when a wound care specialist like Zelia carves out time to capture a career of experiences in text so that it can be shared with others We are indebted to her for making this important contribution to the clinician s armament for dealing with the difficult to heal wounds of their patients Bruce Gibbins PhD Founder Chief Technical Officer and Chairman of the Board of AcryMed Inc Former faculty at the University of Otago Medical School Using the concise compact Fast Facts format this guide encompasses the multitude of new healing technologies and presents important breakthroughs in understanding why some wounds don t heal Each chapter builds step by step on the essential principles of wound care including wound assessment and documentation the spectrum of wounds from simple to complex wound treatment guidelines and protocols and the legal aspects and regulations surrounding wound care This user friendly guide organizes the vast amount of information relating to wound care products and eases the complexity of wound management A Fast Facts in a Nutshell section in each chapter provides quick access to important wound care principles and bullet point information and tables enable readers to quickly locate relevant information This guide will be a useful companion in the day to day care of wound patients reinforcing knowledge needed in all practice settings including acute care critical care long term care home care operating room and outpatient settings Key Features Organizes and simplifies a vast amount of wound care information into a compact user friendly format Addresses wound care assessment protocol and treatment of the spectrum of wounds from simple to complex for all levels of practitioners Encompasses new healing technologies and information regarding difficult to heal wounds Presents comprehensive wound care algorithms dressings debridement procedures ostomy care optimal surface and equipment for wound patients and adjunctive therapies
