

# NuWave PIC Fact Sheet

## Cooking Area

The heating surface is located inside the larger red ring. You may use pans measuring up to the total width of the PIC, which measures 12 inches, however in these situations, heat will transfer more slowly to the outer edges. Do not use pans larger than 12 inches. There are no open flames or hot coils and the NuWave Precision Induction Cooktop remains cool to the touch where not magnetically activated. The appliance can accommodate up to a 50 pound weight load.

## NuWave PIC On the Go

For those cooking on the road or open water, operation of the NuWave PIC requires 10.83 amps when used on an RV or boat. The cooktop uses up to 1300W of energy depending on the temperature setting. The appliance may be plugged into any standard electrical outlet, but cannot operate on batteries.

Temperature Setting	Wattage
Low (100F-170F)	600W
Med/Low (175F-270F)	600W
Med (275F-370F)	800W
Med/High (375F-420F)	1000W
High (425F-560F)	1200W
Sear	1300W

Based on line voltages registering 120V

## E7 Error & Cooling Fan

An "E7" error is displayed when the PIC becomes overheated. This is typically caused by obstruction of the unit's underside Cooling Fan. Please refer to the figure above for reference. Always ensure that the PIC is placed on a flat-level surface with the Cooling Fan unobstructed. Typical interferences include table cloths, wooden cutting boards, placemats and etc.

## NuWave PIC & Pacemakers

Scientific tests have proven that induction cooktops do not generally pose a risk to health. However, persons with a pacemaker should keep a minimum distance of two feet from the NuWave PIC while in operation. For information on other pacemaker-compatible products please visit [www.NuWaveNow.com](http://www.NuWaveNow.com).

## E1 Error

An E1 reading typically means that your PIC does not detect cookware on its surface. This can occur for one of two reasons:

1. Have you placed a pot or pan on the unit? The induction coils contained within the PIC will only work when they are in direct contact with a piece of cookware. To maintain your appliance's effectiveness, always ensure that it rests on a flat surface and that contact is consistent with your cookware.
2. An E1 message may also occur if your chosen cookware is not induction-ready.

## Compatible Cookware

Three simple ways to check if your existing pots and pans or future cookware purchases are compatible with the NuWave PIC:

1. A magnet is typically a great indicator. If it sticks to the bottom of a piece of cookware, this typically means the pot or pan is induction-ready. However be cautioned that there are instances when a cooking vessel's magnetic properties may not be strong enough for the pot to work efficiently with the PIC.
2. Place a small amount of water in a particular pot or pan. If induction compatible, water will begin to boil.
3. An induction-ready symbol may be printed on the bottom of the cookware
