P3MA   **Implementing an IBM High-Performance Computing Solution on IBM POWER8** Dino Quintero,Wei Li,Wainer dos Santos Moschetta,Mauricio Faria de Oliveira,Alexander Pozdneev,IBM Redbooks,2015-09-15 This IBM Redbooks publication documents and addresses topics to provide step by step programming concepts to tune the applications to use IBM POWER8 hardware architecture with the technical computing software stack This publication explores tests and documents how to implement an IBM high performance computing HPC solution on POWER8 by using IBM technical innovations to help solve challenging scientific technical and business problems This book demonstrates and documents that the combination of IBM HPC hardware and software solutions delivers significant value to technical computing clients in need of cost effective highly scalable and robust solutions This book targets technical professionals consultants technical support staff IT Architects and IT Specialists who are responsible for delivering cost effective HPC solutions that help uncover insights among clients data so that they can act to optimize business results product development and scientific discoveries   Deployment and Usage Guide for Running AI Workloads on Red Hat OpenShift and NVIDIA DGX Systems with IBM Spectrum Scale Simon Lorenz,Gero Schmidt,Thomas Schoenemeyer,IBM Redbooks,2020-11-30 This IBM Redpaper publication describes the architecture installation procedure and results for running a typical training application that works on an automotive data set in an orchestrated and secured environment that provides horizontal scalability of GPU resources across physical node boundaries for deep neural network DNN workloads This paper is mostly relevant for systems engineers system administrators or system architects that are responsible for data center infrastructure management and typical day to day operations such as system monitoring operational control asset management and security audits This paper also describes IBM Spectrum LSF as a workload manager and IBM Spectrum Discover as a metadata search engine to find the right data for an inference job and automate the data science workflow With the help of this solution the data location which may be on different storage systems and time of availability for the AI job can be fully abstracted which provides valuable information for data scientists   System-Level Design of GPU-Based Embedded Systems Arian Maghazeh,2018-12-07 Modern embedded systems deploy several hardware accelerators in a heterogeneous manner to deliver high performance computing Among such devices graphics processing units GPUs have earned a prominent position by virtue of their immense computing power However a system design that relies on sheer throughput of GPUs is often incapable of satisfying the strict power and time related constraints faced by the embedded systems This thesis presents several system level software techniques to optimize the design of GPU based embedded systems under various graphics and non graphics applications As compared to the conventional application level optimizations the system wide view of our proposed techniques brings about several advantages First it allows for fully incorporating the limitations and requirements of the various system parts in the design process Second it can unveil optimization opportunities through exposing the information flow between the processing components Third the techniques are generally applicable to a wide range of applications with similar

characteristics In addition multiple system level techniques can be combined together or with application level techniques to further improve the performance We begin by studying some of the unique attributes of GPU based embedded systems and discussing several factors that distinguish the design of these systems from that of the conventional high end GPU based systems We then proceed to develop two techniques that address an important challenge in the design of GPU based embedded systems from different perspectives The challenge arises from the fact that GPUs require a large amount of workload to be present at runtime in order to deliver a high throughput However for some embedded applications collecting large batches of input data requires an unacceptable waiting time prompting a trade off between throughput and latency We also develop an optimization technique for GPU based applications to address the memory bottleneck issue by utilizing the GPU L2 cache to shorten data access time Moreover in the area of graphics applications and in particular with a focus on mobile games we propose a power management scheme to reduce the GPU power consumption by dynamically adjusting the display resolution while considering the user s visual perception at various resolutions We also discuss the collective impact of the proposed techniques in tackling the design challenges of emerging complex systems The proposed techniques are assessed by real life experimentations on GPU based hardware platforms which demonstrate the superior performance of our approaches as compared to the state of the art techniques   *POWER8 High-performance Computing Guide IBM Power System S822LC (8335-GTB) Edition* Dino Quintero,Joseph Apuzzo,John Dunham,Mauricio Faria de Oliveira,Markus Hilger,Desnes Augusto Nunes Rosario,Wainer dos Santos Moschetta,Alexander Pozdneev,IBM Redbooks,2017-08-04 This IBM Redbooks publication documents and addresses topics to provide step by step customizable application and programming solutions to tune application and workloads to use IBM Power SystemsTM hardware architecture This publication explores tests and documents the solution to use the architectural technologies and the software solutions that are available from IBM to help solve challenging technical and business problems This publication also demonstrates and documents that the combination of IBM high performance computing HPC solutions hardware and software delivers significant value to technical computing clients who are in need of cost effective highly scalable and robust solutions First the book provides a high level overview of the HPC solution including all of the components that makes the HPC cluster IBM Power System S822LC 8335 GTB software components interconnect switches and the IBM SpectrumTM Scale parallel file system Then the publication is divided in three parts Part 1 focuses on the developers Part 2 focuses on the administrators and Part 3 focuses on the evaluators and planners of the solution The IBM Redbooks publication is targeted toward technical professionals consultants technical support staff IT Architects and IT Specialists who are responsible for delivering cost effective HPC solutions that help uncover insights from vast amounts of client s data so they can optimize business results product development and scientific discoveries   **NASA Formal Methods** Aaron Dutle,Laura Humphrey,Laura Titolo,2025-07-09 This book constitutes the proceedings of the 17th International Symposium on NASA Formal Methods NFM
