Gurzadyan, David N. Nikogosyan,2013-11-11 Since the invention of the first laser 30 years ago the frequency conversion of laser radiation in nonlinear optical crystals has become an important technique widely used in quantum electronics and laser physics for solving various scientific and engineering problems The fundamental physics of three wave light interactions in nonlinear optical crystals is now well understood This has enabled the production of various harmonic generators sum and difference frequency generators and optical parametric oscillators based on nonlinear optical crystals that are now commercially available At the same time scientists continue an active search for novel highly efficient nonlinear optical materials Therefore in our opinion there is a great need for a handbook of nonlinear optical crystals intended for specialists and practitioners with an engineering background This book contains a complete description of the properties and applications of all nonlinear optical crystals of practical importance reported in the literature up to the beginning of 1990 In addition it contains the most important equations for calculating the main parameters such as phase matching direction effective nonlinearity and conversion efficiency of nonlinear frequency converters      *More Adventures in Contemporary*
