Science and Environment in Chile Javiera Barandiaran,2018-07-31 The politics of scientific advice across four environmental conflicts in Chile when the state acted as a neutral broker rather than protecting the common good In Science

and Environment in Chile Javier Barandiarán examines the consequences for environmental governance when the state lacks the capacity to produce an authoritative body of knowledge Focusing on the experience of Chile after it transitioned from dictatorship to democracy she examines a series of environmental conflicts in which the state tried to act as a neutral broker rather than the protector of the common good She argues that this shift in the role of the state occurring in other countries as well is driven in part by the political ideology of neoliberalism which favors market mechanisms and private initiatives over the actions of state agencies Chile has not invested in environmental science labs state agencies with in house capacities or an ancillary network of trusted scientific advisers despite the growing complexity of environmental problems and increasing popular demand for more active environmental stewardship Unlike a high modernist empire state with the scientific and technical capacity to undertake large scale projects Chile's model has been that of an umpire state that purchases scientific advice from markets After describing the evolution of Chilean regulatory and scientific institutions during the transition Barandiarán describes four environmental crises that shook citizens trust in government the near collapse of the farmed salmon industry when an epidemic killed millions of fish pollution from a paper and pulp mill that killed off or forced out thousands of black neck swans a gold mine that threatened three glaciers and five controversial mega dams in Patagonia

A Guide to identifying priorities and indicators for restoration monitoring Food and Agriculture Organization of the United Nations, 2019-09-25 This guide walks practitioners through seven questions to help them make decisions regarding restoration monitoring First practitioners are asked to determine their restoration goals land use and barriers to sustainability These choices are filtered by constraints and priorities so the practitioner will develop the indicators needed to setup their monitoring framework It provides a framework for identifying indicators Indicators are value laden measures of development performance designed to measure and calibrate progress Environmental indicators are used to provide synthesized knowledge on environmental issues and to highlight the extent of environmental trends They also help to reduce complexity provide important links between science and policy and help decision makers to provide guidance on environmental governance An indicator framework can provide a management tool to help countries develop implementation strategies and allocate resources accordingly to reach restoration goals Tracking progress with indicators can act as a report card to measure progress towards restoration and help ensure the accountability of all stakeholders for achieving the goals The guide uses country case studies to show how a practitioner could answer the questions offering a menu of potential indicators for measuring progress that other monitoring practitioners might find useful Next it highlights the different types of data that can feed into creating an indicator framework depending on resource constraints and information needs Some restoration programs may require fewer cost effective indicators that are collected locally Other programs may be able to integrate small locally collected data with big data from satellite imagery and social media

Environmental Publics Sally Eden, 2016-12-08 How do ordinary people think about the environment as they go about their daily lives Does thinking about the environment make them do things differently This book is the first to explore the idea of environmental publics that is the ways in which ordinary people engage with environmental issues across different practical contexts of work play and home Emphasising the practices of environmental engagement Environmental Publics examines how people consume the environment learn about it campaign for its protection and enjoy it through their leisure time But the book avoids relying on idealisations of consumers or citizens or theoretical constructs about behavioural norms that have traditionally dominated research in this field Instead this book differentiates environmental publics not by who they are but by what they are doing their daily practices It also analyses specifically the geographies of those practices how what people do affects the environment but in different ways across time and space and at different scales aspects of practices that are neglected in the literature With an interdisciplinary perspective this book will be of interest to students

and scholars in geography sociology science and technology studies political science and anthropology It is written in an accessible and readable style so as to be useful for preliminary and more advanced courses in environmental management perception and policy as well as in studies of modern society consumption and environmentalism

Ecology and Management of Sitka Spruce N. Merle Peterson, Patrick Martin, 1997-08-01 Sitka spruce the largest of the world's spruces is an important component of British Columbia's coastal forests Its ecology gives it a special place in the sustainable management of the province's forests However in west coast forestry it is poorly known in comparison with its main coniferous companions Douglas fir western redcedar and western hemlock As an important international forestry resource it is crucial that Sitka spruce its ecology and the ecosystems in which it occurs be clearly understood by those who are involved with its management This book is the most recent major work on the ecology and management of Sitka spruce The authors describe how this fascinating tree reproduces grows and functions in its natural geographic range They discuss both the ecology of Sitka spruce and silvicultural questions such as original plantation spacing juvenile spacing and fertilization to accelerate the harvestability of second growth coastal spruce stands Sitka spruce derives its importance not only from its prominence as an international transportable genetic resource but also from its role in riparian systems and its biodiversity values Here in North America's west coast rainforest this magnificent tree illustrates the ecology of complex forest ecosystems and their cultural wilderness historic and economic values
