

## Redox Reactions Lab Reporting Worksheet

In science, reporting what has been done in a laboratory setting is incredibly important for communicating, replicating, and validating findings. However, writing scientific reports can be a little overwhelming. There are a set of agreed upon components that the scientific community requires when reporting scientific research. Answer the following questions to describe what occurred during the lab you conducted in Labster. Be sure to use complete sentences and descriptions that fully represent what you experienced. Writing a lab report is less about being correct or incorrect, than it is accurately reporting what happened and why. So, do not worry about reporting data that might seem counterintuitive or unexpected. Focus on clearly communicating what you did and what you observed.

Write your answers on a new line.

- What was the title of the lab you completed?

### 1. Topic

- What was the subject you were trying to understand better in the lab?

### 2. Background Information

- What information from the textbook and classroom is relevant for the subject you were trying to gain a better understanding of in the lab? Identify the concepts and explain how they are related to the lab topic.
- During the lab, what information from the theory section provided additional background information about the subject? (To review the theory section, launch the lab and click the Theory tab on the top of the data pad). Identify the concepts and explain how they are related to the lab topic.

### 3. Phenomenon

- Most scientific observation involves examining phenomena or processes. What phenomenon or process were you observing in the lab? What were you able to change and explore? What did the simulation not allow to change?

### 4. Method

Describing what you did during a lab supports other scientists in replicating your work. It is through this consistent replication that scientists are able to see repeating patterns and develop ideas that help move science forward. When you discuss your observations, in a later section, you will have to describe, in detail, what you did. You may also have to describe what choices you made, why you made them, and any concerns about things that occurred that were unexpected. To have enough information to do this, you need to keep very detailed notes. What doesn't seem important in the moment may end up being something that explains your findings later. A benefit of conducting virtual labs when learning science is that many potential errors are controlled for you. The virtual lab environment often will alert you if something is not going the way it should. This does not occur in non-virtual settings. The virtual lab setting
