*Adaptive Radiations of Neotropical Primates* Marilyn A. Norconk, Alfred L. Rosenberger, Paul A. Garber, 2011-06-28 This collection of 29 papers grew out of a symposium entitled Setting the Future Agenda for Neotropical Primates The symposium was held at the Department of Zoological Research National Zoological Park Washington D C on February 26 27 1994 and was sponsored by the Wenner Gren Foundation for Anthropological Research Smithsonian Institution and Friends of the National Zoo We put the symposium together with two objectives to honor Warren G Kinzey for his contributions to the growing field of platyrrhine studies and to provide researchers who work in the Neotropics with the opportunity to discuss recent developments to identify areas of research that require additional study and especially to help guide the next generation of researchers The symposium provided the opportunity to recognize Warren as a mentor and collaborator to the contribution of the study of platyrrhines Contributions to the book were expanded in order to provide a more comprehensive view of platyrrhine evolution and ecology to emphasize the interdisciplinary nature of many of these studies and to highlight the central role that New World monkeys play in advancing primatology If this volume were to require major revisions after just one more decade of research that would be a fitting testament to Warren's enthusiasm and his drive to continually update the field with new ideas and methods Tributes to Warren and a list of his publications have been published elsewhere Norconk 1994 1996 Rosenberger 1994 1995

A Guide to the Psychology of Eating

Leighann R. Chaffee, Stephanie P. da Silva, 2022-01-13 Why are spicy cuisines characteristic of hot climates Does our stomach or our brain tell us when it is time to eat And how do we decide if bugs are food Employing a learner centered approach this introduction

to the psychological mechanisms of consumption engages readers with questions and cross cultural examples to promote critical analysis and evidence based comprehension The discipline of psychology provides an important perspective to the study of eating given the remarkable complexity of our food environments including society and culture eating habits and relationships with food As everything psychological is simultaneously biological the role of evolutionary pressures and biopsychological forces are bases to explore complex processes within the book such as sensation and perception learning and cognition and human development The authors illuminate contemporary eating topics including the scope and consequences of overnutrition the aetiology of eating disorders societal focus on dieting and body image controversies in food policy and culture inspired cuisine Supplemental resources and exercises are provided in a pedagogically focused companion website      Psychology for A-Level Erika Cox,2001 Precisely targeted at AQA A Level Psychology specification A It will also be of interest to those who are new to psychology and who want to get a flavour of the kinds of topics in which psychologists are interested Preface p vii      *Human Infancy* Daniel G. Freedman,2016-07-07 Originally published in 1974 this volume is primarily devoted to what is known about human infancy from an ethological evolutionary viewpoint Included are discussions of pan specific traits presumably shared by all infants individual genetic variations on these behaviours as judged by twin studies sex differences presumably shared by infants of all ethnic groups and genetically based ethnic differences However the author favours neither biological determinism nor cultural determinism and does not consider interactionism to be a viable solution Instead a monistic position is taken stressing the inseparability of the innate and the acquired of genetics and environment and of biology and culture The heredity environment issue is tackled head on throughout the volume The interaction between the two an implied dualism is described as a statistical abstraction from measured populations while the position here is that heredity and environment are not separable in any single organism In the same vein the author argues that on logical grounds everything one does every cultural act has within it some biological component      *A Guide to Undergraduate Science Course and Laboratory Improvements* National Science Foundation (U.S.). Directorate for Science Education,1979      *The Evolution of Memory Systems* Elisabeth A. Murray,Steven P. Wise,Kim S. Graham,2017 The Evolution of Memory Systems sets out a bold and exciting new theory about memory It proposes that several memory systems arose during evolution and that they did so for the same general reason to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past      **Exotic Animal Training and Learning, An Issue of Veterinary Clinics: Exotic Animal Practice** Barbara Heidenreich,2012-09-28 The latest information on training and behavior of exotic pet animals for the exotic animal veterinarian Topics to be covered include the application of science based training technology a framework for solving behavior problems training avian patients and their caregivers trained falconry birds and veterinary medicine preserving the client veterinarian relationship technicians and animal training small mammal training in the veterinary practice training reptiles and amphibians for
