

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1—Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2—Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

The Great Regeneration Dorn Cox, 2023-03-16 In

the age of climate change food scarcity and increasing industrialization can a few visionary farmers find global solutions through technology and create networked open source regenerative agriculture at a truly transformative scale In *The Great Regeneration* farmer technologist Dorn Cox and author activist Courtney White explore unique groundbreaking research aimed at reclaiming the space where science and agriculture meet as a shared human endeavor By employing the same tools used to visualize and identify the global instability in our climate and our communities such as satellite imagery they identify ways to accelerate regenerative solutions beyond the individual farm *The Great Regeneration* also explores the critical function that open source tech can have in promoting healthy agroecological systems through data sharing and networking If these systems are brought together there is potential to revolutionize how we manage food production around the world decentralizing and deindustrializing the structures and governance that have long dominated the agricultural landscape and embrace the principles of regenerative agriculture with democratized open source technology disseminating high quality information not just to farmers and ranchers but to all of us as we take on the role of ecosystem stewards In this important book the authors present a simple choice we can allow ourselves to be dominated by new technology or we can harness its potential and use it to understand and improve our shared environment The solutions we need now they write involve a broader public narrative about our relationship to science to each other and to our institutions And we all need to understand that the choices made today will affect the generations to come *The Great Regeneration* shows how together we can create positive and lasting change

Leading the Sustainable Organization Peter McAteer, 2025-08-05 Never before have we been presented with the prospect of redesigning business at scale to create a more sustainable future for our planet and the people who inhabit it As we pass the midpoint of the Sustainable Development Goals 2015 2030 the world has changed There is not only more progress and policy but also more disagreement on the way forward The bottom line is that the shared goals developed in 2015 will not be met global warming will likely exceed targets and the collective challenge will be left to a new generation The book is organized as a series of business challenges and key questions that enable a transition from making legacy companies more carbon and waste efficient to operating in fundamentally new ways The vast majority of the new infrastructure the world will need by 2050 still needs to be built Those challenges will not be solved by legacy companies working to protect their market position in the face of a changing world The book offers a chapter by chapter guide to enable new leaders to turn challenges into opportunities
