**Electricity and Magnetism in Biology and Medicine** Ferdinando Bersani, 2012-12-06 In the last few decades the research on bioelectromagnetics has expanded worldwide About one thousand researchers are now working in the field in a variety of institutions throughout the world including medical biological engineering and technical laboratories and protection agencies After many years of research a clear picture is now emerging Initially the research was mainly interested in the therapeutic applications of ELF electric and magnetic fields and the RF range was mainly taken into consideration with respect to thermal effects only Then the growing body of biological effects of ELF fields on cells and biological tissues particularly for the repair processes in bone have drawn the attention of researchers to non thermal effects ranging from static fields to microwaves A specific field of interest that has been the object of a large debate in the last twenty years has been the potential health risk associated with electric power production and distribution and more recently with domestic and industrial appliances In the last few years the explosion of the market for cellularphones has highlighted the issue of possible health dangers related to their use and to the widespread presence of base stations The first World Congress on Electricity and Magnetism in Biology and Medicine was held in Orlando Florida in 1992 and collected the widest amount of contributions from almost all the major researchers involved in the field

*Performance Assessment* Brian McLean Semple, 1992 The second International Assessment of Educational Progress focused on the mathematics and science achievement of 13 year olds Performance assessments were used as part of the overall assessment in four countries England Scotland Soviet Union and Taiwan and five Canadian provinces The performance assessment approach drew heavily on the experience of the United Kingdom in such assessments but added features to meet the needs of an international study The performance tasks required students to apply concepts observe measure manipulate equipment and materials and record and interpret data Approximately 3 000 students participated in the 1991 mathematics and science assessments Scores varied widely from task to task and from country to country Relative performance of countries and provinces generally differed from those identified by written curriculum based tests A major lesson learned from the experimental test administration is that this form of performance assessment can be used reliably in international comparative studies although at an estimated cost three to four times greater than that for an equivalent number of written test questions Sample mathematics and science tasks are included and there is an appendix on problem solving in mathematics that describes outcomes produced by Scottish students

**VET Boost: Towards a Theory of Professional Competencies** ,2009-01-01 The themes of the different papers in this book are related to five major areas of research First the book presents the work on a large scale assessment in vocational and occupational education and training Reason was the work of Frank Achtenhagen and his colleagues on the preparation of a VET PISA which started in 2004 which has now become more and more a concrete program The contributions to this part of the book contain a project description and profound presentations and discussions of measurement and evaluation problems It reflects also the work of Achtenhagen with respect to item response theory measurement and testing The second part of this book presents a unique endeavour of promoting VET research The Swiss Federal Office for Professional Education and Technology OPET initiated a program of

Leading Houses of VET which are dedicated to different important research topics This program might serve as example for comparable approaches in other countries The third part highlights central issues of research on learning processes curriculum theory and the use of technology Here the work of Achtenhagen on competence profile modelling competence measurement and instructional and curriculum designing is touched The fourth part stresses social and emotional learning as important aspects of VET learning The fifth part considers the political and institutional dimensions of VET research which have to be taken into account when an international large scale assessment of VET shall be getting started Achtenhagen s work on learning at work leaning in economics and learning under the conditions of institutional modelling are discussed The whole book is a collection of central issues around a field that is not yet taken enough into consideration in educational research but pushed and supported by Frank Achtenhagen VET research He belongs to the founding fathers of it and this is why precisely the book reflects new trends and new concepts with respect to the question What can we educational psychologists and educational researchers learn from a rich and central research field
