In recent years an increasing variety of health professionals have been involved with the care of ophthalmic patients. The aim has been to provide an efficient high quality and cost effective service to patients which utilises the skills of the multidisciplinary ophthalmic team. This study guide offers both a basic introduction and a skills escalator for nurses and other health professionals. Those who make use of its content and use the To do panels for reflection and research will develop their knowledge and skills more quickly and acquire good habits of self assessment and self directed learning. The simple questions at the end of each chapter can be used for self testing or as a basis for questions that mentors can ask their students. The content is deliberately restricted to the basics in terms of the areas chosen though they are all covered in reasonable depth. Students are encouraged to use the skills checklists at the end of the book to document their personal progress and validate their developing practice. These will provide useful evidence for annual performance appraisals.

Cataract and Glaucoma for Eyecare Paraprofessionals Brian Duvall, Al Lens, Elliot B. Werner, 1999 The Basic Bookshelf for Eyecare Professionals is a series that provides fundamental and advanced material with a clinical approach to clinicians and students. A special effort was made to include information needed for the certification exams in ophthalmic and optometric assisting as well as for surgical assistants, opticians plus low vision and contact lens examiners. Written especially for auxiliary personnel, this text not only includes sections on cataract and glaucoma but also contains common patient questions and misconceptions. The cataract chapters cover types, causes, symptoms and detection of cataracts. Cataract surgery is also discussed including traditional surgery as well as combination procedures. The glaucoma chapters give details on the physiology of intraocular pressure such as aqueous formation and drainage. There are individual chapters on open angle glaucoma, angle closure glaucoma, secondary glaucoma and congenital glaucoma. Each chapter gives causes, details for patient work ups, detection and diagnosis and treatment modalities.

New Developments in Eye Research O. R. Ioseliani, 2006 The consequences of ageing populations combined with the strain to the human eye caused by computers and widespread poor nutritional practices has resulted in an upsurge of research dealing with vision. The book is comprehensive in scope. All aspects of diagnosis are carefully examined, surgical indications and techniques are explained and the role of medical treatment is
