Procedural and declarative information in software manuals Nicole

Ummelen,2022-05-20 People who use software manuals want to get something done Procedural information directly supports this goal but the use of declarative information in manuals has often been under discussion Current research gives rise to the expectation that manual users tend to skip declarative information most of the time Also no effects of declarative information in software manuals have yet been found In this study information use and information effects in software manuals are investigated in three experiments thereby taking different user types different task types and different information arrangements into account A new technique was applied the click read method This technique enables the software user to use the manual and carry out software tasks at the same time while information selection and times are recorded automatically in logfiles For the first time quantitative data are presented about the amounts of procedural and declarative information that were selected and the times that were spent using these information types Although procedural information is selected more often and used longer declarative information appears to be a substantial part of the information selection Moreover the results show that using declarative information positively affects performance on future tasks performance on reasoning tasks and factual knowledge

Sustainable Materials and Technologies in VLSI and Information

Processing Shashi Kant Dargar,Shilpi Birla,Abha Dargar,Avtar Singh,D. Ganeshaperumal,2025-05-23 The International Conference on Sustainable Materials and Technologies in VLSI and Information Processing aimed to converge advancements in semiconductor technology with sustainable practices addressing the critical need for eco consciousness in the field of Very Large Scale Integration VLSI and Information Processing The primary purpose of the conference was to explore innovative materials manufacturing processes and design methodologies that minimize environmental impact while optimizing performance and functionality in electronic devices Key features of the conference included interdisciplinary discussions on sustainable materials such as biodegradable polymers low power semiconductor materials and recyclable electronic components Additionally it focused on emerging technologies like quantum computing neuromorphic computing and photonic integrated circuits exploring their potential contributions to sustainability in VLSI and information processing The intended audience comprised of researchers scientists engineers and industry professionals from academia government and private sectors involved in semiconductor technology materials science environmental sustainability and information processing What set this conference apart was its unique emphasis on sustainability within the realm of VLSI and information processing While there are conferences focusing on either semiconductor technology or sustainability separately this conference bridged the gap between the two fostering discussions and collaborations that pave the way for greener and more efficient electronic devices and systems
