*Beautiful Code* Greg Wilson, Andy Oram, 2007-06-26 How do the experts solve difficult problems in software development? In this unique and insightful book, leading computer scientists offer case studies that reveal how they found unusual, carefully designed solutions to high-profile projects. You will be able to look over the shoulder of major coding and design experts to see problems through their eyes. This is not simply another design patterns book or another software engineering treatise on the right and wrong way to do things. The authors think aloud as they work through their projects' architecture, the tradeoffs made in its construction, and when it was important to break rules. This book contains 33 chapters contributed by Brian Kernighan, Karl Fogel, Jon Bentley, Tim Bray, Elliotte Rusty Harold, Michael Feathers, Alberto Savoia, Charles Petzold, Douglas Crockford, Henry S. Warren Jr., Ashish Gulhati, Lincoln Stein, Jim Kent, Jack Dongarra, and Piotr Luszczek, Adam Kolawa, Greg Kroah-Hartman, Diomidis Spinellis, Andrew Kuchling, Travis E. Oliphant, Ronald Mak, Rogerio Atem de Carvalho, and Rafael Monnerat, Bryan Cantrill, Jeff Dean, and Sanjay Ghemawat, Simon Peyton Jones, Kent Dybvig, William Otte, and Douglas C. Schmidt, Andrew Patzer, Andreas Zeller, Yukihiro Matsumoto, Arun Mehta, TV Raman, Laura Wingerd, and Christopher Seiwald, and Brian Hayes. *Beautiful Code* is an opportunity for master coders to tell their story. All author royalties will be donated to Amnesty International.

**The Construction of Words** Geert

Booij, 2018-04-13 This volume focuses on detailed studies of various aspects of Construction Morphology and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions that are pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms and they motivate the properties of existing complex words. Both schemas and individual words are stored and hence there is no strict separation of lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing and language change.
