## **Sankhya And Science Applications Of Vedic Philosophy To Modern Science:**

*Sankhya and Science* Ashish Dalela, 2014-11-17 Why the Observer Needs a Central Place in Science The dominantly materialist outlook of modern science leaves a lot unexplained This includes the nature of sensation concepts beliefs and judgments and an understanding of morality Science was developed by evicting all aspects of the subject from its theories and this has now become a hindrance in the scientific study of the observer Does the eviction of subjective qualities only impact the understanding of the subject or does it also affect the understanding of matter within science The dominant belief today is that the current view of matter is nearly final and mind and consciousness will be soon explained based on it Sankhya and Science argues to the contrary The nature of material objects if they are created and perceived by conscious beings is different than if they are independent of consciousness If objects are created and perceived by conscious beings they should be described as symbols of meanings rather than as meaningless things Questions Tackled in This Book First the author discusses a wide variety of problems in modern science including mathematics computing physics chemistry biology and neuroscience and how they cannot be solved in the materialistic view Then the author offers the alternative view of matter based on Sankhya philosophy meanings in consciousness are reflected in matter to create symbols of meaning Now to know all aspects of matter we need to understand all aspects of the observer otherwise the theory of matter is incomplete Mind and Matter Integrated into a Semantic Science The book connects a semantic view of matter to the problems of indeterminism and uncertainty in quantum physics the problem of meaning in computing theory the nature of information in chemistry and biology and the problem of sensation and cognition in psychology and neuroscience Unlike in modern science where meaning and information are emergent properties of physical objects in Sankhya objects are created when the mind transfers meanings into space time The reader will see how mind and matter can be integrated without stepping outside the rational empirical approach to science Moreover this integration can engender new kinds of empirical theories better able to explain phenomena currently lying outside the reach of science This deeper understanding of mind and matter also builds up the conceptual framework for understanding other complex topics such as Vedic Cosmology meditation mantras prana reincarnation and karma The book illustrates how the choices of consciousness are first converted into meanings in the mind which are then converted into energy which is then converted into material objects through incremental steps By the end of the book the author builds a new approach to doing science This paradigm will be able to explain more phenomena than current theories and will solve the problems of indeterminism uncertainty and incompleteness which plague current sciences How Is This book Different Most people drawing parallels between science and Eastern philosophy end up claiming that the Eastern mystics knew thousands of years back what modern science discovered only recently This conclusion may be satisfying as a bridge between religion and science but it is ultimately futile if the mystical viewpoint is similar to the materialist view then why we still need mysticism Instead of parallels this book offers a contrarian view of matter and science

It hopes to show that current science and mysticism are not convergent although a new science and mysticism could be. The convergence requires not faith but an evolution of science itself. This approach is interesting because it tells us that the convergence will be rational rather than a matter of faith.

*Exposition of Vedic Thought* Satyavrata Siddhantalankar, 1980

Description: The Vedas, which are the treasure house of knowledge, are admittedly the oldest books in the library of mankind. They contain ideas which have set scholars to doubt if there has been a Social Evolution in the world. Max Muller has gone so far to say: "If I were asked under what sky the human mind has most fully developed some of its choicest gifts, has most deeply pondered over the greatest problems of life and has found solutions of some of them which well deserve the attention of those who have studied Plato and Kant, I should point to India." This book reveals those gifts and the answers to those problems of life over which human mind has pondered over: What is mind? What is soul? What is consciousness? What is God? What is creation? What is education? What is reincarnation? What is death? All these psychological, spiritual and cosmological questions have been dealt with in the Vedas and discussed threadbare in *Exposition of Vedic Thought*. The special feature of the book is that it deals with these problems in the light of modern thought and compares the Vedic theories with those of psychology. For instance, urges have been classified in three groups: Puttraishana signifying Freud's Sex urge, Lokaishana signifying Adler's Will to Power and Vittaishana, third urge for which there is no particular school in Psychology but which has been consigned by Macdougall in the group of Instincts. Similarly, the Conscious, the Sub-conscious, the Unconscious have been compared to Jagrat, Svapna and Sushupti with a difference that whereas psycho analysis makes a three fold division of Consciousness, Vedic psychology

speaks of the fourth plane of Consciousness known as Turiya Exposition of Vedic Thought is an original and masterly contribution towards the enrichment of Vedic Literature *Science and Spiritual Quest* ,2008 **The Illuminate of Görlitz, Or, Jakob Böhme's (1575-1624) Life and Philosophy** Herman Vetterling,1923 Vedic View of the Earth S.
