Klöpffer, 2012-12-06 This book has grown out of several courses of lectures held at the University of Mainz in the years 1978 to 1981 at the Ecole Polytechnique Fédérale Lausanne and at the University of Fribourg Switzerland The last two courses were held in the framework of the 3e Cycle lectures in June 1981 According to this genesis the emphasis of the book lies on a unified and concise approach to introducing polymer spectroscopy rather than on completeness which by the way could hardly be achieved in a single volume In contrast to other books on this subject equal weight is given to electronic spectroscopy vibrational spectroscopy and spin resonance techniques The electronic properties of polymers have been increasingly investigated in the last ten years until recently however these studies and the spectroscopic methods applied have not generally been considered as part of polymer spectroscopy The increasing use of electronic spectroscopy by polymer researchers on the other hand shows that this type of spectroscopy provides efficient tools for gaining insight into the properties of polymers which cannot be obtained by any other means Proton and Carbon NMR Spectra of Polymers Quang Tho Pham, 1991 Contains 458 NMR spectra with associated analytical notes covering acrylics amides dienes ethers olefins siloxins styrenes and derivatives urethanes vinyls and vinylidenes This work provides details of the chemical structure of the analyzed sample in addition to analytical conditions including nucleus frequency spectrometer and lock
