

# XR<sup>TM</sup>-600B

## OPERATING GUIDE

**WARNING:**  
TO PREVENT ELECTRICAL SHOCK OR FIRE  
HAZARD, DO NOT EXPOSE THIS APPLIANCE  
TO RAIN OR MOISTURE.

**FEATURES:**  
5 balanced low impedance and 6 unbalanced high impedance inputs; channel "pre" monitor sends; 9-band graphic EQ; 300 watts RMS; effects loops.

### GENERAL DESCRIPTION

The new XR<sup>TM</sup>-600B represents our latest effort to combine professional features previously found only in separate mixer/equalizer/power amp components into a single compact and rugged package. The redesign of the XR-600B utilizes the latest advances in semiconductor technology and the overall circuitry has been designed and optimized by use of the latest computer-aided design techniques. This unit's improved specifications have been made possible by a thorough and complete design effort resulting in all new circuitry from the input jack through to the speaker output.

The XR-600B features six independent input channels and includes high impedance and balanced low impedance inputs, a separate "pre" monitor send, active shelving type high and low equalization, and a "post" effects send on **each** channel. Master level controls are provided for the main, monitor and effects mixes. A full nine-band graphic equalizer has been built into the system and utilizes the most contemporary active filter circuitry available. Additional flexibility is provided by the patch panel, enabling this versatile unit to be used in conjunction with an extremely wide range of auxiliary equipment. The new XR-600B also features the unique ability to blend reverb return signals into the monitor mix.

The newly re-engineered 300 watt RMS (2 ohms) power amplifier features our exclusive DDT<sup>TM</sup> ("Distortion Detection Technique") compression circuitry that electronically senses the onset of clipping and automatically activates the compression circuit to minimize distortion in the power amp. The use of this DDT compression circuit effectively increases the apparent headroom available, thus utilizing every precious watt of power available. This compression feature allows the XR-600B to quite effectively compete with systems having considerably more RMS power.

The power amp of the XR-600B utilizes eight high-voltage, high-speed T0-3 power devices bolted to a massive heatsink. The internal power supply consists of a very large power (mains) transformer featuring a grain oriented silicon steel core and a high degree of magnetic shielding to minimize extraneous hum fields. Silicon rectifiers connected in a full wave bridge feed power to large electrolytic filter banks and provide considerably more music power than the 300 watts power rating would indicate.

Overall, the XR-600B brings professional performance together in a single extremely versatile and compact package, offering features and specifications formerly available only with separate components.

### FRONT PANEL

#### INPUT JACKS (A) AND (B)

The new XR-600B is equipped with dual channel input connectors. The balanced low impedance input (A) is intended for use with low impedance microphones and accepts the professional XLR standard type connectors. The high impedance input (B) is equipped with standard phone jack connectors as per professional practice. NOTE: It is impossible to use **both** low and high impedance inputs on any single channel simultaneously.

#### CHANNEL CONTROLS

Each of the XR-600B's six independent channels contain five controls: Level, Monitor, Effects and High and Low Equalization.

#### CHANNEL LEVEL CONTROL (C)

This control varies the level of the input preamplifier. This input preamp is designed around a variable negative feedback approach and provides optimum dynamic range as well as extremely low noise operation. This control is used to set the level of the respective channels to achieve the **main mix**.
