XR-600

OWNERS MANUAL

GENERAL DESCRIPTION

The new XR-600 represents our latest effort to combine professional features previously found only in separate mixer /equalizer /power amp components into a single compact and rugged package. The redesign of the XR-600 utilizes the latest advances in semiconductor technology and the overall circuitry has been designed and optimized by use of the latest computer-aided design techniques. This unit's improved specifications have been made possible by a thorough and complete design effort resulting in all new circuitry from the input jacks through to the speaker output.

The XR-600 features six independent input channels and includes a separate "pro" monitor send, active shelving type high and low equalization, and a "post" effects send on **each** channel. Master level controls are provided for the main, monitor, and reverb return. A full nine-band graphic-equalizer has been built into the system and utilizes the most contemporary active filter circuitry available. Additional flexibility is provided by the XR-600's patch panel, enabling this versatile unit to be used in conjunction with an extremely wide range of auxiliary equipment.

The newly re-engineered 210-Watt RMS (4 Ohms) power amplifier features our exclusive DDT® ("Distortion Deflection Technique") compression circuitry that electronically senses the onset of clipping and automatically activates the compression circuit to minimize distortion in the power amp. The use of this DDT® compression circuit effectively increases the apparent headroom available, thus utilizing every precious watt of power available. This compression feature allows the XR-600 to quite effectively compete with units having considerably more RMS power.

The power amp of the XR-600 utilizes eight high-voltage, high-speed TD-3 power devices bolted to a massive heatsink. The internal power supply consists of a very large power (main) transformer featuring a grain oriented silicon steel core and a high degree of magnetic shielding to minimize extraneous hum fields. Silicon rectifiers connected in a full wave bridge feed power to large electrolytic filter banks and provide considerably more music power than the 210 Watts RMS (4 Ohms) power rating would indicate.

Overall, the XR-600 brings professional performance together in an extremely versatile and compact package, offering features and specifications formerly available only with separate components in a single portable package.

WARNING: To prevent electrical shock or fire hazard, do not expose this appliance to rain or moisture.
