Global Health Informatics Education

E.J.S. Hovenga,J. Mantas,2004-08-30 Throughout the world healthcare professionals often lack knowledge of the possibilities and limitations of systematically processing data information and knowledge and of the resulting impact on quality decision making They are often asked to use information technologies of which they have limited appreciation in order to enhance their practices through better use of information resources However for systematically processing data information and knowledge in medicine and in healthcare healthcare professionals who are well trained in medical informatics or health informatics are needed It will only be through improved education of healthcare professionals and through an increase in the number of well trained workers in health and medical informatics that this lack of knowledge and associated skills can begin

to be reversed Although we can recognize further progress in educating health and a considerable number of educational programs for health informatics medical informatics specialists have been set up there is still a need to enhance these educational activities world wide considering global developments as well as new curricular concepts and technological opportunities IMIA and in particular its working group on health and medical informatics education is the leading international society stimulating such educational activities in various ways This book is especially helpful for educators in the field of health medical informatics **Clinical Simulation** Richard Kyle,W. Bosseau Murray,2010-07-27 Simulation facilities are invaluable for training in medicine and clinical education biomedical engineering and life sciences They allow the practice of prevention containment treatment and procedure in a risk free setting This book is a practical guide and reference to the latest technology operations and opportunities presented by clinical simulation It shows how to develop and make efficient use of resources and provides hands on information to those tasked with setting up and delivering simulation facilities for medical clinical and related purposes and the development and delivery of simulation based education programs A step by step manual to developing successful simulation programs Shows how to design construct outfit and run simulation facilities for clinical education and research The Residency Review Committee of the US Accreditation Council on Graduate Medical Education has begun requiring residency programs to have simulation as an integral part of their training programs

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage

where we seek to understand how these basic skills are used to support the acquisition and use of abstract mathematical concepts
