Numerical Solution of Nonlinear Elliptic Problems Via Preconditioning Operators István Faragó, János Karátson, 2002 Numerical Solution of Nonlinear Elliptic Problems Via Preconditioning Operators Theory Applications

The Numerical Solution of Integral Equations of the Second Kind Kendall E. Atkinson, 1997-06-28 This book provides an extensive introduction to the numerical solution of a large class of integral equations *Analytical Approaches to Multidimensional Balance Laws* Olga S. Rozanova, 2006 It is difficult to overestimate the importance of mathematical investigation of balance laws They arise

in many areas of physics mechanics chemistry biology social sciences In this collective book we concentrate in particular on the equations of continuous medium and related to them As a rule they are very complicated in their primitive form An important feature of such equations is a possible formation of singularities even in initially smooth solution within a finite time The structure of the singularities can be very complex A natural step in the approach to this problem is the transition despite the three dimensionality of our world to spatially one dimensional model Significant progress has been achieved in this direction Unfortunately the methods of the one dimensional theory as usual cannot be adapted to a case of many spatial variables However there are many attempts to deal with multidimensional problems We would like to present some of them All of the papers are written by outstanding experts representing various schools in mathematics and mechanics Each paper is organised as follows it contains an elementary as far as it is possible introduction to a problem a brief review of previously published results and then original results of the authors are presented
