

The answers to the practice questions below are as given to the IB-examiners.
The following notes may help you to interpret these and make full use of the guidance given.

- There are no half marks awarded. Each mark is shown by the number in brackets (1).
- Points worth single marks are separated from each other by a semicolon (;).
- Alternative possible answers are separated from each other by a dash (/).
- Any answer given in **bold** or underlined *must* be present to score the mark.
- Information in brackets () is not needed to score the mark.
- Notes given in *italics* are to guide the examiner on what to accept/reject in their marking.
- OWTTE means 'or words to that effect', so alternative wording that conveys the same meaning can be equally rewarded.
- ECF means 'error carried forward', so examiners must award marks for an incorrect answer from an earlier part of a question used correctly in a subsequent step.
- MP1, MP2 etc. represent method marks to be awarded by an examiner for answers showing the appropriate steps of the working (method) necessary for answering the question.

You may notice occasional differences between the calculations or wordings given in the answers and those in the worked solutions. This is because the answers give the final solution with the minimum of working, and the worked solutions provide the extra reasoning and working needed to understand how the answers are attained.

energy sources Written for practicing engineers researchers and students alike this book discusses state of the art mathematical and engineering tools for the modeling simulation and control of renewable and mixed energy systems and related power electronics Computational methods for multi domain modeling of integrated energy systems and the solution of power electronics engineering problems are described in detail Chapters follow a consistent format featuring a brief introduction to the theoretical background a description of problems to be solved as well as objectives to be achieved Multiple block diagrams electrical circuits and mathematical analysis and or computer code are provided throughout And each chapter concludes with discussions of lessons learned recommendations for further studies and suggestions for experimental work Key topics covered in detail include Integration of the most usual sources of electrical power and related thermal systems Equations for energy systems and power electronics focusing on state space and power circuit oriented simulations MATLAB and Simulink models and functions and their interactions with real world implementations using microprocessors and microcontrollers Numerical integration techniques transfer function modeling harmonic analysis and power quality performance assessment MATLAB Simulink Power Systems Toolbox and PSIM for the simulation of power electronic circuits including for renewable energy sources such as wind and solar sources Written by distinguished experts in the field Integration of Renewable Sources of Energy 2nd Edition is a valuable working resource for practicing engineers interested in power electronics power systems power quality and alternative or renewable energy It is also a valuable text reference for undergraduate and graduate electrical engineering students

Geochemistry of Non-Traditional Stable Isotopes Clark M. Johnson, Brian L. Beard, Francis Albarède, 2018-12-17 The goal for Volume 55 of Reviews in Mineralogy and Geochemistry was to bring together a summary of the isotope geochemistry of non traditional stable isotope systems as is known through 2003 for those elements that have been studied in some detail and which have a variety of geochemical properties In addition recognizing that many of these elements are of interest to workers who are outside the traditional stable isotope fields we felt it was important to include discussions on the broad isotopic variations that occur in the solar system theoretical approaches to calculating isotopic fractionations and the variety of analytical methods that are in use We hope therefore that this volume proves to be useful to not only the isotope specialist but to others who are interested in the contributions that these non traditional stable isotopes may make toward understanding geochemical and biological cycles The review chapters in this volume were the basis for a two day short course on nontraditional stable isotopes held prior May 15 16 2004 to the spring AGU CGU Meeting in Montreal Canada
