developed within Positive Psychology and of their relevance for intervention and application in the most diverse life domains. Hefferon and Boniwell use a rigorous though accessible and friendly style of presentation. By means of effective learning supports they stimulate readers' active engagement in critical reflections on each topic. The authors address the several issues and open questions which still characterize Positive Psychology as a relatively recent domain through a balanced and objective approach.

Antonella Delle Fave, University of Milano, Italy; Kate Hefferon and Ilona Boniwell have produced the first textbook which has set out purposefully to support students and teachers in higher education in the exciting new area of positive psychology. The authors have experience of teaching the lectures described in each chapter and the book is written in a way that students will find engaging and fun. Each chapter has clear learning objectives, mock essay questions, measurement tools, summaries and a guide to further resources. The content has been well researched and the early chapters cover the main concepts of positive psychology such as emotions, happiness, wellbeing, optimism and resilience. The later chapters are more novel and cover interventions and applications, all with a critical eye. Of particular note is the chapter on the body in positive psychology, a topic which is frequently omitted from the thoughts and feelings approach of other texts in this area. I would strongly recommend this book to all students and teachers of psychology.
