Potato Quality Manual:

DEPTH IMAGING AND APPLICATION IN POTATO QUALITY GRADING Qinghua Su, 2023-11-25 As one of the world's most important crops, potatoes play an important role in maintaining the stability of the global food supply. Many countries, including China, believe that food supply security is a basic condition for maintaining national stability and development. Therefore, potatoes can not only solve the problem of international food shortage but also promote the development of international trade. In recent years, with the continuous improvement of planting technology, the global production and trade volume of potatoes have also been continuously increasing. However, the development of traditional potato quality grading technology is relatively slow. Currently, it still relies on manual sorting in many countries and regions. Because workers can not keep their attention for a long time under huge work pressure and their understanding of grading standards is inconsistent, a large amount of wrong potato grading often occurs. This result not only affects farmers' income but also causes serious waste in the potato processing due to unqualified raw potatoes. In addition, with the continuous increase of manual wages, the cost of manual grading of potatoes has been under challenge. Therefore, achieving automation of potato quality grading is imperative. Traditional grading system mainly uses cameras to capture potato color images and achieves potato quality grading through color information analysis. This method can reach high success rate for certain defects detection such as green skin, surface rot and mechanical damage. Due to the variety of shapes of potatoes growing underground, the appearance defects such as bending, bump and hollow are widely existing. These abnormal samples may fail to be detected and grade to wrong quality groups, the 3D appearance information cannot be fully perceived in 2D color images. In response to such issues, we have decided to build a machine vision system based on depth cameras which can obtain depth images of potatoes with 3D shape information. Unlike each pixel in a color image that stores color information, each pixel in a depth image stores the distance from the target to the camera. Therefore, the potato 3D surface features can be sensed and used for bump and hollow defects detection. To capture high quality depth images, we have constructed a specialized depth imaging system and developed the image acquisition software based on OpenCV and OpenNI framework. Then each potato surface features are analyzed and extracted for shape analysis, defect detection and overall quality grading. In recent years, machine learning technology has developed rapidly and has been widely applied in fields such as object recognition and feature detection. Hence, we also apply machine learning technology to the field of potato quality grading. By developing a machine learning model based on convolutional neural networks, we can directly input potato depth images and get the corresponding quality level of the samples. The experiment achieved good grading results. Since color and depth images of potatoes are actually collected simultaneously in data collection step, a novel algorithm is developed for potato 3D model rebuilding. The method is based on Point Cloud Library and OpenGL technology and it shows the advantage in solving the problem of data traceability, especially when users have objections to automatic quality classification results. This model not only displays 3D potato shape

model but also supports scaling and 360 degree rotation operations Overall we believe that with the development of machine learning and depth sensing potato quality grading systems will become more intelligent efficient and low cost

Federal Register ,2006-12 **Bibliography of Agriculture with Subject Index** ,1993-07 Software Engineering Doug Bell, 2000

Software Engineering A Programming Approach provides a unique introduction to software engineering for all students of computer science and its related disciplines It is also ideal for practitioners in the software industry who wish to keep track of new developments in the discipline The third edition is an update of the original text written by Bell Morrey and Pugh and

further develops the programming approach taken by these authors. The new edition, however, being updated by a single author, presents a more coherent and fully integrated text. It also includes recent developments in the field and new chapters include those on formal development, software management, prototyping, process models and user interface design. The programming approach emphasized in this text builds on the reader's understanding of small scale programming and extends this knowledge into the realm of large scale software engineering. This helps the student to understand the current challenges of software engineering as well as developing an understanding of the broad range of techniques and tools that are currently available in the industry. Particular features of the third edition are a pragmatic, non-mathematical approach; an overview of the software development process is included; self-test questions in each chapter ensure understanding of the topic; extensive exercises are provided at the end of each chapter; an accompanying website extends and updates material in the book; use of Java throughout as an illustrative programming language; consistent use of UML as a design notation. Douglas Bell is a lecturer at Sheffield Hallam University, England. He has authored and co-authored a number of texts, including most recently *Java for Students*. Handbook of Food Preservation M. Shafiur Rahman, 2020-06-10. The processing of food is no longer simple or straightforward but is now a highly interdisciplinary science. A number of new techniques have developed to extend shelf life, minimize risk, protect the environment and improve functional, sensory and nutritional properties. Since 1999, when the first edition of this book was published, it has facilitated readers' understanding of the methods, technology and science involved in the manipulation of conventional and newer, sophisticated food preservation methods. The Third Edition of the *Handbook of Food Preservation* provides a basic background in postharvest technology for foods of plant and animal origin, presenting preservation technology of minimally processed foods and hurdle technology or combined methods of preservation. Each chapter compiles the mode of food preservation, basic terminologies and sequential steps of treatments, including types of equipment required. In addition, chapters present how preservation method affects the products' reaction kinetics and selected prediction models related to food stability, what conditions need be applied for best quality and safety and applications of these preservation methods in different food products. This book emphasizes practical, cost-effective and safe strategies for implementing preservation techniques for wide varieties of food products. Features: Includes extensive overview on the postharvest handling and treatments for foods of plants and animal origin; Describes comprehensive preservation methods using chemicals and microbes such as fermentation, antimicrobials, antioxidants, pH lowering and nitrite; Explains comprehensive preservation by controlling of water structure and atmosphere such as water activity, glass transition state diagram, drying, smoking, edible coating, encapsulation and controlled release; Describes preservation methods using conventional heat and other forms of energy such as microwave, ultrasound, ohmic heating, light irradiation, pulsed electric field, high pressure and magnetic field. Revised, updated and expanded with 18 new chapters, the *Handbook of Food Preservation* Third Edition remains the definitive resource on food preservation and is useful for practicing industrial and
