Forest Degradation and Management Gopal Shukla, Abha Manohar K., Anil Raj Kizha, Pankaj Panwar, Sumit Chakravarty, 2025-05-01 Forest Degradation and Management An Indian Perspective provides an overview of the dynamics and challenges surrounding forest degradation in India. It reveals the harmful impacts of human activity on natural resources, ecosystems, and communities and emphasizes the urgent need for sustainable forest management practices. The book is divided into four parts, each offering a different perspective on forest degradation. Part I presents an overview of forest degradation in India, including a comparative analysis of assessment tools. Part II explores the ecological impacts of forest degradation on ecosystems. Part III is dedicated to societal aspects, examining the consequences of human activity such as cultivation, eco-tourism, resource utilization, and deforestation, while also analyzing the impact of forest degradation on forest-dependent communities. Part IV focuses on mitigation strategies, highlighting the role of protected areas, governance policies, and participatory approaches. This volume, within the book series Forestry Sciences, is an invaluable resource for students, researchers, policymakers, and conservationists seeking to tackle the complex challenges of forest degradation. It provides knowledge and practical insights to inform decision-making processes, guide sustainable forest management strategies, and promote responsible land use practices.

Reforesting the Earth Thomas K. Rudel, 2023-09-05 Forests offer a natural solution to the climate crisis. Conserving and expanding them not only removes carbon from the atmosphere but also protects and fosters biodiversity. Yet the results of elite-driven reforestation initiatives have been disappointing, and in many world regions, deforestation continues relentlessly. Thomas K. Rudel examines a wide range of conservation and reforestation efforts to shed new light on the social factors that lead to success. He details effective coalition-building strategies and organizational models that have protected, restored, and expanded forests around the world. Rudel argues that successful reforestation projects bring together diverse groups of people with a stake in the land and a commitment to collective decision-making. They give voice to different economic and social interests, including small farmers, Indigenous peoples, loggers, ranchers, government officials, NGO personnel, international donors, and climate activists. These varied coalition members each make commitments to promote forests. Farmers limit the extent of lands under cultivation; governments protect land tenure for smallholders and wealthy donors;
