Rafael Reif, 2009-06-29 Three dimensional 3D integration is clearly the simplest answer to most of the semiconductor industry's vexing problems heterogeneous integration and reductions of power form factor delay and even cost Conceptually the power latency and form factor of a system with a fixed number of transistors all scale roughly linearly with the diameter of the smallest sphere enclosing frequently interacting devices This clearly provides the fundamental motivation behind 3D technologies which vertically stack several strata of device and interconnect layers with high vertical interconnectivity In addition the ability to vertically stack strata with divergent and even incompatible process flows provides for low cost and low parasitic integration of diverse technologies such as sensors energy scavengers nonvolatile memory dense memory fast memory processors and RF layers These capabilities coupled with today's trends of increasing levels of integrated functionality lower power smaller form factor increasingly divergent process flows and functional diversification would seem to make 3D technologies a natural choice for most of the semiconductor industry Since the concept of vertical integration of different strata has been around for over 20 years why aren't vertically stacked strata endemic to the semiconductor industry The simple answer to this question is that in the past the 3D advantages while interesting were not necessary due to the tremendous opportunities offered by geometric scaling In addition even when the global interconnect problem of high performance single core processors seemed insurmountable without innovations such as 3D alternative architectural solutions such as multicores could effectively delay but not eliminate the need for 3D *EMBEC & NBC 2017* Hannu Eskola, Outi Väisänen, Jari Viik, Jari Hyttinen, 2017-06-12 This volume presents the proceedings of the joint conference of the European Medical and Biological Engineering Conference EMBEC and the Nordic Baltic Conference on Biomedical Engineering and Medical Physics NBC held in Tampere Finland in June 2017 The proceedings present all traditional biomedical engineering areas but also highlight new emerging fields such as tissue engineering bioinformatics biosensing neurotechnology additive manufacturing technologies for medicine and biology and bioimaging to name a few Moreover it emphasizes the role of education translational research and commercialization *Energy: a Continuing Bibliography with Indexes*, 1982
