Paul Pandian,2010 Many modern technologies give the impression that they somehow work by magic particularly when they operate automatically and their mechanisms are invisible A technology called RFID Radio Frequency Identification which is relatively new has exactly this characteristic Librarians everywhere are closely watching RFID technology Advances over using bar codes on library materials RFID tags are being touted as a way to radically redesign how library materials are handled But it is expensive The tags are vulnerable to wear and tear and the technology is not fully developed It s unclear what sort of return on investment ROI it provides While it is common for libraries to now have information technology expertise within their organizations RFID may appear unfamiliar RFID for Libraries A practical guide examines what RFID

technology is and how it works The book reviews the development of computer technology and its effects on library operations over the last couple of decades Further examination features the applications of RFID technology in libraries An assessment of current implementations in libraries and the lessons learnt provides suggestions to overcome the issues faced Concluding chapters look into the future to see what developments might be possible with RFID in libraries Benefiting from the rich experience the author has gained during recent implementation of RFID based system for his library and the important title aids the library and information community in understanding RFID technology from a library perspective

Independent Living for a Greying Population Lara Srivastava, 2022-09-01 It is widely known today that not only are the aged ageing or the old getting older but they are also increasing in number the world over. At the same time proper care and support for our aged is increasingly at risk. Without some form of support the quantitative extension of life cannot be matched by a qualitative one. This may mean that the opportunity provided by a longer life is squandered and life itself of course is nothing if not opportunity. Societies find that self sufficiency and independence not only contribute to individual well being but are also economically desirable due to the resultant increase in productivity. The challenges of daily living for a growing population of the aged form the basis of the independent living platform, the AGE HOME platform which is described in this book. The platform combines both existing and emerging technologies suitable for the home. Its use and application is considered in the wider context of Web 2.0, the internet of things and other elements of the burgeoning digital world. It is time that a holistic and multi disciplinary approach to this constantly enlarging area of human existence is taken. This book is written for researchers and designers of wireless tools, analog and digital circuits as well as academics who are active in the various fields of Human Sciences. Foreword: This book appears at the right moment when several developments have made age and its consequences an important element of human existence. It makes for informative reading being based on considerations related to independence for the aged and the application of emerging technologies to enhance this independence. From the foreword by Houlin Zhao, Deputy Secretary General of the International Telecommunication Union.
