

# CHAPTER 6:

## Sinusoidal Functions

**NOTE:** Answers are given to the same number of decimal points as the numbers in each question.

### Getting Started, p. 344

1. a)  $x$  represents the number of times the price is reduced by \$2. The factor  $(30 - 2x)$  represents the price of one T-shirt in terms of the number of times the price is reduced; the factor  $(100 + 20x)$  represents the total number of T-shirts sold in terms of the number of times the price is reduced.

b) Since the revenue generated by T-shirt sales can be modelled by the function  $R(x) = (30 - 2x)(100 + 20x)$ , for  $R(x)$  to be equal to 0, one or both of the factors must be equal to 0.  $100 + 20x$  can only be equal to 0 if  $x$  is negative, and this is not possible. Therefore,  $30 - 2x = 0$ .

$$-2x = -30$$

$$x = 15 \text{ times}$$

c) Create a table with two columns. In the first column put the number of price reductions. In the second column, put the corresponding revenue. Continue until the revenue starts to decrease.

Number of Price Reductions	Revenue (dollars) $R(x) = (30 - 2x)(100 + 20x)$
0	3000
1	3360
2	3640
3	3840
4	3960
5	4000
6	3960

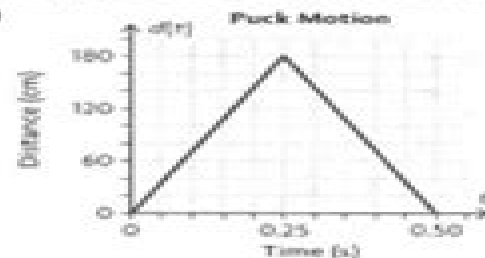

The price will have to be dropped 5 times to reach the maximum revenue.

d) From the table created in part c, it's apparent that the maximum revenue is \$4000.

e) The price of a T-shirt is equal to  $30 - 2x$ , so to obtain the maximum revenue, the T-shirts will sell for  $30 - 2(5)$  or 20 dollars.

f) The number of T-shirts sold is equal to  $100 + 20x$ , so to obtain the maximum revenue,  $100 + 20(5)$  or 200 T-shirts will be sold.

2. a)

The puck travelled 180 cm to the opposite end of the table in the first 0.25 s and 180 cm back in the next 0.25 s for a total distance of 360 cm.

b) The puck was farthest away from where it was shot when it was 180 cm away, and this occurred after 0.25 s.

c) The puck travelled 180 cm in the first 0.25 s.

$$\frac{180 \text{ cm}}{0.25 \text{ s}} = \frac{720 \text{ cm}}{1 \text{ s}} = 720 \text{ cm/s}$$

d) The domain is all possible values of the time, or  $t$ , while the range is all possible values of the distance, or  $d$ . Therefore, the domain is  $\{t \in \mathbb{R} \mid 0 \leq t \leq 0.5\}$ , and the range is  $\{d \in \mathbb{R} \mid 0 \leq d \leq 180\}$ .

3. a)

Within the larger triangle there exist two smaller right triangles. The smaller right triangle with a hypotenuse of 15 cm has the measurements of two angles given:  $40^\circ$  and  $90^\circ$ . Therefore, the measurement of the unknown angle within that triangle is  $50^\circ$ . With that angle

**An Introduction to Non-Perturbative Foundations of Quantum Field Theory** Franco Strocchi, 2013-02-15 Quantum Field Theory QFT has proved to be the most useful strategy for the description of elementary particle interactions and as such is regarded as a fundamental part of modern theoretical physics In most presentations the emphasis is on the effectiveness of the theory in producing experimentally testable predictions which at present essentially means Perturbative QFT However after more than fifty years of QFT we still are in the embarrassing situation of not knowing a single non trivial even non realistic model of QFT in 3 1 dimensions allowing a non perturbative control As a reaction to these consistency problems one may take the position that they are related to our ignorance of the physics of small distances and that QFT is only an effective theory so that radically new ideas are needed for a consistent quantum theory of relativistic interactions in 3 1 dimensions The book starts by discussing the conflict between locality or hyperbolicity and positivity of the energy for relativistic wave equations which marks the origin of quantum field theory and the mathematical problems of the perturbative expansion canonical quantization interaction picture non Fock representation asymptotic convergence of the series etc The general physical principles of positivity of the energy Poincare covariance and locality provide a substitute for canonical quantization qualify the non perturbative foundation and lead to very relevant results like the Spin statistics theorem TCP symmetry a substitute for canonical quantization non canonical behaviour the euclidean formulation at the basis of the functional integral approach the non perturbative definition of the S matrix LSZ Haag Ruelle Buchholz theory A characteristic feature of gauge field theories is Gauss law constraint It is responsible for the conflict between locality of the charged fields and positivity it yields the superselection of the unbroken gauge charges provides a non perturbative explanation of the Higgs mechanism in the local gauges implies the infraparticle structure of the charged particles in QED and the breaking of the Lorentz group in the charged sectors A non perturbative proof of the Higgs mechanism is discussed in the Coulomb gauge the vector bosons corresponding to the broken generators are massive and their two point function dominates the Goldstone spectrum thus excluding the occurrence of massless Goldstone bosons The solution of the U 1 problem in QCD the theta vacuum structure and the inevitable breaking of the chiral symmetry in each theta sector are derived solely from the topology of the gauge group without relying on the semiclassical instanton approximation

Poroelasticity Alexander H.-D. Cheng, 2016-04-20 This book treats the mechanics of porous materials infiltrated with a fluid poromechanics focussing on its linear theory poroelasticity Porous materials from inanimate bodies such as sand soil and rock living bodies such as plant tissue animal flesh or man made materials can look very different due to their different origins but as readers will see the underlying physical principles governing their mechanical behaviors can be the same making this work relevant not only to engineers but also to scientists across other scientific disciplines Readers will find discussions of physical phenomena including soil consolidation land subsidence slope stability borehole failure hydraulic fracturing water wave and seabed interaction earthquake aftershock fluid injection induced seismicity and heat induced pore pressure spalling as well as discussions of seismoelectric and seismoelectromagnetic effects The work also explores the biomechanics of cartilage bone and blood vessels Chapters present theory using an intuitive phenomenological approach at the bulk continuum level and a thermodynamics based variational energy approach at the micromechanical level The physical mechanisms covered extend from the quasi static theory of poroelasticity to poroelastodynamics poroviscoelasticity porothermoelasticity and porochemoelasticity Closed form analytical solutions are derived in details This book provides an excellent introduction to linear poroelasticity and is especially relevant to those involved in civil engineering petroleum and reservoir engineering rock mechanics hydrology geophysics and biomechanics

*Business and Environmental Sustainability* Sigrun M. Wagner, 2020-07-19 Environmental sustainability is increasingly important to organisations whether for regulatory financial or ethical reasons Business and Environmental Sustainability looks at the environmental aspect of sustainability for all organisations pursuing competitive advantage The book provides theoretical foundations from science economics policy and strategy introduces three environmental challenges climate change pollution and waste and looks at how corporate functions can address these This textbook provides a thorough foundation by introducing readers to the science reasoning and theory behind environmental sustainability and then delves into how these ideas translate into principles and business models for organisations to use Next it covers environmental challenges from climate change pollution and waste and then goes on to examine the different corporate functions from supply chain management to human resources to illustrate how environmental sustainability is managed and put into practice in organisations Finally a set of integrative case studies draws everything together and enables the reader to apply various analytical tools with the aim of understanding how companies can not only reduce their environmental footprint but can positively contribute to environmental sustainability Written by an award winning lecturer Business and Environmental Sustainability boasts a wealth of pedagogical features including examples from a range of industries and countries plus a companion website with slides quiz questions and instructor material This will be a valuable text for students of business management and environmental sustainability and will also be suitable for broader courses on corporate responsibility and sustainability across environmental studies political science and engineering

*Business Cycles: Theories, Evidence and Analysis* Niels Thygesen, Kumaraswamy Velupillai, Stefano Zambelli, 1991-10-22 The new classical revolution seems to have transformed macroeconomics into the theory of economic fluctuations It is in a sense a return to the origins of macroeconomics as a discipline as fashioned by Hayek Keynes and Lindahl But the scope has shifted in the intervening five decades and more It is this new scope and the new tools that forge its expansion that are surveyed and

analysed in this volume      *Mathematics* Linda Bostock, Suzanne Chandler, 1981 Designed to meet the Common Core requirements of the University of London Syllabus B and other similar schemes offered by the major boards this book incorporates both modern and effective traditional approaches to mathematical understanding Worked examples and exercises support the text An ELBS LPBB edition is available
