Ethical Dilemmas for Critically Ill Babies Eduard Verhagen, Annie Janvier, 2015-10-06 Most neonates who now survive intensive care would have died 50 years ago and nature would have decided the outcomes making ethical discussions about initiating or withholding resuscitation irrelevant Medical developments in neonatology have changed the way we respond to diseases of neonates to their illness and to their parents Not only as physicians but also as a society Decisions on when to start withhold or withdraw life saving interventions in critically ill neonates are among the most difficult decisions in pediatric practice These decisions are fraught with ethical dilemmas for example deciding whether withholding intensive care leading to death is superior to uncertain survival with a risk of disability and the additional burden of intensive care This book covers important ethical questions that arise in neonatal intensive care units Questions such as whether to intervene medically and whether we are good at predicting the outcome of fragile neonates whether a medical intervention should be withheld or withdrawn and who should be primarily responsible for these decisions and how

Neonatal Airway Management Lindsay C. Johnston, Taylor Sawyer, 2025-01-24 Intubation is one of the most performed procedures in neonatal medicine The field of neonatal airway management has been transformed by many notable developments over the past 5 10 years Most importantly the use of pre medication video laryngoscopy and laryngeal masks have been the subject of numerous recent clinical investigations and academic publications Despite ongoing research neonatal airway management continues to carry a high risk of complications and both short and long term morbidities A comprehensive book on neonatal airway management has never been published Hence the proposed book fills an important niche in the healthcare literature This book provides a comprehensive state of the art review of neonatal airway management and serves as a valuable resource for clinicians educators and researchers involved in neonatal care The book reviews patient practice provider and system factors important in neonatal airway management Chapters explore key topic areas including airway management techniques training competency assessment premedication video laryngoscopy laryngeal mask airway and others Written by experts in the field and including the most up to date scientific and clinical information Neonatal Airway Management serves as a useful resource for physicians and researchers dealing with and interested in neonatal airway management It provides a concise yet comprehensive summary of the current state of the field that helps guide patient management and stimulates investigative efforts
