NetBackup is an enterprise-level distributed backup and recovery application. The environment consists of the master server, media server, storage library, networking hardware, and client agents. NetBackup supports a wide variety of Unix, Linux, VMS, and Windows systems. The original backup solution was developed by Control Data Corp., later acquired by Openvision, which gave the product its "NetBackup" name. NetBackup was then bought by Veritas and is currently owned and supported (poorly) by Symantec.

Daemons and Processes

On the master server there are four NetBackup daemons started in sequence:

1. **bprd** — the request daemon started during system boot
2. **bpsched** — the scheduler daemon started by *bprd*
3. **bpdbm** — the NetBackup database manager started by *bpsched*
4. **bpjobd** — the job monitor daemon started by *bpdbm*

One the media server, there are up to nine NetBackup daemons:
