

Solution Brief:

Verity® for Generative AI Network Fabrics

The rise of generative artificial intelligence (AI) is driving businesses to design networks that are more agile, automated, and can handle massive traffic loads. Research recently conducted by the Dell'Oro Group states that up to 30 percent of Ethernet data center switch ports will be allocated to systems that support advanced AI.

EE Networks Verity® — an intent-based networking (IBN) management and orchestration system, automates the design and operation of validated generative AI network fabrics. This document highlights the unique networking characteristics required by generative AI platforms and how Verity can be used to operate data center network infrastructure with unparalleled visibility, agility, and automation using standards-based methodologies.
