In response to our call for papers we received 229 submissions from 40 countries. The task of selecting the papers in this volume was done by our Program Committee and many other external reviewers. After an extremely rigorous review process and extensive discussion the Committee selected 78 papers. We hope all accepted papers will eventually appear in scientific journals in a more polished form. Two special issues one of *Algorithmica* and one of the *International Journal on Computational Geometry and Applications* with selected papers from ISAAC 2008 are in preparation.

Current Trends in Theoretical Computer Science Gheorghe Păun, Arto Salomaa, 2001. The scientific developments at the end of the past millennium were dominated by the huge increase and diversity of disciplines with the common label computer science. The theoretical foundations of such disciplines have become known as theoretical computer science. This book highlights some key issues of theoretical computer science as they seem to us now at the beginning of the new millennium. The text is based on columns and tutorials published in the *Bulletin of the European Association for Theoretical Computer Science* in the period 1995-2000. The columnists themselves selected the material they wanted for the book and the editors had a chance to update their work. Indeed much of the material presented here appears in a form quite different from the original. Since the presentation of most of the articles is reader friendly and does not presuppose much knowledge of the area the book constitutes suitable supplementary reading material for various courses in computer science.
