Ecophysiology of root systems-environment interaction Boris Rewald,Omer Falik,Douglas Godbold,Shimon Rachmilevitch,2014-09-03 There is a scarcity of detailed information regarding the ecophysiology of root systems and the way root system functioning is affected by both internal and external factors Furthermore global climate change is expected to increase the intensity of climate extremes such as severe drought heat waves and periods of heavy rainfall in addition other stresses such as salinization of soils are increasing world wide Recently an increasing awareness has developed that understanding plant traits will play a major role in breeding of future crop plants For example there is increasing evidence that the traits of root systems are defined by the properties of individual roots However further knowledge on the functional importance of root segments and the molecular physiological mechanisms underlying root system functioning and persistence is needed and would specifically allow modifying crop root system functionality and efficiency in the future

Another major gap in knowledge is localized at the root soil interface and in regard to the potential adaptive plasticity of root rhizosphere interactions under abiotic stress and or competition It is currently unknown whether adaptations in microbe communities occur for example due to modified exudation rates and what are the subsequent influences on nutrient mobilization and uptake Furthermore uncovering the mechanisms by which roots perceive neighboring roots may not only contribute to our understanding of plant developmental strategies but also has important implications on the study of competitive interactions in natural communities and in optimizing plant performance and resource use in agricultural and silvicultural systems In this Research Topic we aimed to provide an on line open access snapshot of the current state of the art of the field of root ecology and physiology with special focus on the translation of root structure to function and how root systems are influenced by interplay with internal and external factors such as abiotic stress microbes and plant plant interaction We welcomed original research papers but reviews of specific topics articles formulating opinions or describing cutting edge methods were also gladly accepted

Investigating with Power Solids Erica Dakin Voolich, 1997. Classroom-tested activities use Power Solids to search for relationships among the shapes to discover the connection between surface area and volume and to find out how three-dimensional shapes are related to their two-dimensional counterparts called nets. Children make and test conjectures then turn them into generalizations. In the comprehensive teacher's notes for each activity, the author offers discussion prompts as well as the mathematics behind each task.

Radiation Heat Transfer, Augmented Edition E. M. Sparrow, 2018-04-27. Revised to include more information on analytical models for wavelength independence. Radiation Heat Transfer Augmented Edition has been rearranged, providing problems within each chapter rather than at the end of the book. Written by Ephraim M. Sparrow, a generalist who works on a very broad range of problems that encompasses almost all mechanical engineering topics, the book presents key ideas without being exhaustive. Sparrow oversees the Laboratory for Heat Transfer and Fluid Flow Practice, whose function is to undertake both industrially based and fundamental problems that fall within the bounds of heat transfer and fluid flow.
