Davis,Michael W. Burnham,1991 **Reservoir System Analysis** ,1992 SPARK: A Parallelizing Approach to the High-Level Synthesis of Digital Circuits Sumit Gupta,Rajesh Gupta,Nikil D. Dutt,Alexandru Nicolau,2007-05-08 Rapid advances in microelectronic integration and the advent of Systems on Chip have fueled the need for high level synthesis i e an automated approach to the synthesis of hardware from behavioral descriptions SPARK A Parallelizing Approach to the High Level Synthesis of Digital Circuits presents a novel approach to the high level synthesis of digital circuits that of parallelizing high level synthesis PHLS This approach uses aggressive code parallelizing and code motion techniques to discover circuit optimization opportunities beyond what is possible with traditional high level synthesis This PHLS approach addresses the problems of the poor quality of synthesis results and the lack of controllability over the transformations applied

during the high level synthesis of system descriptions with complex control flows that is with nested conditionals and loops Also described are speculative code motion techniques and dynamic compiler transformations that optimize the circuit quality in terms of cycle time circuit size and interconnect costs We describe the SPARK parallelizing high level synthesis framework in which we have implemented these techniques and demonstrate the utility of SPARK s PHLS approach using designs derived from multimedia and image processing applications We also present a case study of an instruction length decoder derived from the Intel Pentium class of microprocessors This case study serves as an example of a typical microprocessor functional block with complex control flow and demonstrates how our techniques are useful for such designs SPARK A Parallelizing Approach to the High Level Synthesis of Digital Circuits is targeted mainly to embedded system designers and researchers This includes people working on design and design automation The book is useful for researchers and design automation engineers who wish to understand how the main problems hindering the adoption of high level synthesis among designers **Scientific and Technical Aerospace Reports** ,1994 **Linear Programming and Its Applications** James K. Strayer,2012-12-06 Linear Programming and Its Applications is intended for a first course in linear programming preferably in the sophomore or junior year of the typical undergraduate curriculum The emphasis throughout the book is on linear programming skills via the algorithmic solution of small scale problems both in the general sense and in the specific applications where these problems naturally occur The book arose from lecture notes prepared during the years 1985 1987 while I was a graduate assistant in the Department of Mathematics at The Pennsylvania State University I used a preliminary draft in a Methods of Management Science class in the spring semester of 1988 at Lock Haven University Having been extensively tried and tested in the classroom at various stages of its development the book reflects many modifications either suggested directly by students or deemed appropriate from responses by students in the classroom setting My primary aim in writing the book was to address common errors and difficulties as clearly and effectively as I could **QoS-based Wavelength Routing in Multi-Service WDM Networks** Admela Jukan,2012-12-06 The need to establish wavelength routed connections in a service differentiated fash ion is becoming increasingly important due to a variety of candidate client networks e g IP SDH SONET ATM and the requirements for Quality of Service QoS de livery within transport layers Up until now the criteria for optical network design and operation have usually been considered independently of the higher layer client signals users i e without taking into account particular requirements or constraints originating from the users differentiation Wavelength routing for multi service net works with performance guarantees however will have to do with much more than finding a path and allocating wavelengths The optimisation of wavelength routed paths will have to take into account a number of user requirements and network con straints while keeping the resource utilisation and blocking probability as low as pos sible In a networking scenario where a multi service operation in WDM networks is assumed while dealing with heterogeneous architectures e g technology driven as transparent or regenerative efficient algorithms and

protocols for QoS differentiated and dynamic allocation of physical resources will playa key role This work examines the development of multi criteria wavelength routing for WDM networks where a set of performances is guaranteed to each client network taking into account network properties and physical constraints
