Abawajy,Ajith Abraham,Hani Hagrass,2009-09-23 The main objective of pervasive computing systems is to create environments where computers become invisible by being seamlessly integrated and connected into our everyday environment where such embedded computers can then provide information and exercise intelligent control when needed but without being obtrusive Pervasive computing and

intelligent multimedia technologies are becoming increasingly important to the modern way of living. However, many of their potential applications have not yet been fully realized. Intelligent multimedia allows dynamic selection, composition, and presentation of the most appropriate multimedia content based on user preferences. A variety of applications of pervasive computing and intelligent multimedia are being developed for all walks of personal and business life. Pervasive computing, often synonymously called ubiquitous computing, palpable computing, or ambient intelligence, is an emerging field of research that brings in revolutionary paradigms for computing models in the 21st century. Pervasive computing is the trend towards increasingly ubiquitous connected computing devices in the environment, a trend being brought about by a convergence of advanced electronic and particularly wireless technologies and the Internet. Recent advances in pervasive computers, networks, telecommunications, and information technology, along with the proliferation of multimedia mobile devices such as laptops, iPods, personal digital assistants (PDAs), and cellular telephones, have further stimulated the development of intelligent pervasive multimedia applications. These key technologies are creating a multimedia revolution that will have significant impact across a wide spectrum of consumer, business, healthcare, and governmental domains.

Innovations in Satellite Communications and Satellite Technology Daniel Minoli, 2015-02-27. Surveys key advances in commercial satellite communications and what might be the implications and/or opportunities for end users and service providers in utilizing the latest, fast-evolving innovations in this field. This book explores the evolving technical options and opportunities of satellite networks. Designed to be a self-contained reference, the book includes background technical material in an introductory chapter that will serve as a primer to satellite communications. The text discusses advances in modulation techniques such as DBV-S2, extensions DVS-S2X, spotbeam-based geosynchronous and medium earth orbit High Throughput Satellite (HTS) technologies, and Internet applications enhanced mobility services with aeronautical and maritime applications. Machine-to-Machine (M2M) satellite applications, emerging ultra-HD technologies, and electric propulsion. The author surveys the latest innovations and service strategies and the resulting implications, which involves discussing advances in modulation techniques and HTS spotbeam technologies. Surveying emerging high-speed aeronautical mobility services and maritime and other terrestrial mobility services. Assessing M2M machine-to-machine applications, emerging Ultra-HD video technologies, and new space technology. Satellite communication is an integral part of the larger fields of commercial television, media, government, and military communications because of its multicast, broadcast capabilities, mobility, reliability, and global reach. High Throughput Satellites are expected to revolutionize the field during this decade, providing very high speed yet cost-effective Internet access and connectivity anywhere in the world, in rural areas, in the air, and at sea. M2M connectivity enabled by satellite communications connects trucks on transcontinental trips, aircraft in real-time telemetry aggregation, and mercantile ships. A comprehensive analysis of the new advances in satellite communications. **Innovations in Satellite Communications Technology** is a reference for telecommunications and satellite providers and end users technology.
