**Designing plastics circulation:** Anne Raudaskoski, Torben Lenau, Tapani Jokinen, Anna Velander Gisslén, Anna-Luise Metze, 2019-08-05 Presently most electrical electronic equipment EEE is not designed for recycling let alone for circulation Plastics in these products account for 20% of material use and through better design significant environmental and financial savings could be gained Technological solutions and circular design opportunities already exist but they haven't been implemented yet Some challenges such as ease of disassembly could be resolved through better communication and by sharing learnings across the value chain Instead of WEEE we should focus on developing CEEE Circular Electrical and Electronic Equipment The case examples of this report show how different stages of the lifecycle can be designed so that plastics circulation becomes possible and makes business sense It is time to take a leap in material flow management and scale up these circular solutions across the industry

**Emotionally Durable Design** Jonathan Chapman, 2015-04-10 Emotionally Durable Design presents counterpoints to our throwaway society by developing powerful design tools methods and frameworks that build resilience into relationships between people and things The book takes us

beyond the sustainable design field's established focus on energy and materials to engage the underlying psychological phenomena that shape patterns of consumption and waste. In fluid and accessible writing, the author asks why do we discard products that still work. He then moves forward to define strategies for the design of products that people want to keep for longer. Along the way, we are introduced to over twenty examples of emotional durability in smart phones, shoes, chairs, clocks, teacups, toasters, boats, and other material experiences. *Emotionally Durable Design* transcends the prevailing doom and gloom rhetoric of sustainability discourse to pioneer a more hopeful, meaningful, and resilient form of material culture. This second edition features pull-out quotes, illustrated product examples, a running glossary, and comprehensive stand-firsts; this book can be read cover to cover or dipped in and out of. It is a daring call to arms for professional designers, educators, researchers, and students from a range of disciplines, from product design to architecture, framing an alternative genre of design that reduces the consumption and waste of resources by increasing the durability of relationships between people and things.

Polyethylene and Technology Mark A. Spalding, Ananda Chatterjee, 2017-10-26 This handbook provides an exhaustive description of polyethylene. The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene copolymers and polyethylene produced from metallocene catalysts. With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers, processing aids, anti fogging agents, pigments and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable and foaming processes. The business of polyethylene including markets, world capacity and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.

**The Ecology of the New Economy** Jacob Park, Nigel Roome, 2017-09-08 A revolution is taking place in the development of global information and communications technologies. In slightly more than a decade the World Wide Web has gone from the idea of an obscure English scientist to a consumer oriented technology system with an expected one billion users by 2005. The technologies that enable this to happen are advancing rapidly which is leading to both an unprecedented number of start up companies and a host of innovative new alliances between companies. The growth has been so rapid and unexpected that little research and analysis has yet been done on what impact this transformation has had or will have on the ability of companies to meet the global sustainability challenge. As environmental strategy has traditionally been portrayed in terms of risk cutting and resource efficiency there is a danger that critical business issues such as information technology, R D and e commerce development are examined in isolation from the wider sustainable business perspective. An important objective of the book is to explore, document and raise awareness of sustainability concerns arising from the emerging global information economy. The information economy is defined in the broadest sense possible including software, hardware, telecommunication, traditional and wireless and advanced communication technologies. Some of the key issues and questions that are examined include Case studies on how and to what degree sustainability concerns are being integrated into the business model of electronic telecommunication and dot com firms. The relationship between the diffusion of information and communication technologies and the energy and resource intensity of companies. The role of information and communication technologies in the shaping of policies for sustainability, its impacts on sustainable or unsustainable lifestyles and its implications for the interaction between companies and other actors. Corporations and the global digital divide. The Ecology of the New Economy will be of interest to academics.
