

## QUESTION 12

- (a)
- The number of photoelectrons emitted per second is directly proportional to the intensity of radiation.
  - The energy of the emitted electrons depend on the frequency of the incident radiation.
  - There exists a threshold frequency for all surfaces, below which no electrons are emitted no matter the intensity of radiation.

(b) Given: Power of source =  $6 \times 10^{-3}$  Watts or Joules / s  
 No of photons per second =  $1 \times 10^{16}$

$$\text{Energy per photon} = \frac{\text{Power}}{\text{no of photons per second}}$$

$$= \frac{6 \times 10^{-3}}{1 \times 10^{16}}$$

$$E = hf = 6 \times 10^{-19} \text{ Joules}$$

Energy =  $hf - W_0 = eV_0$  where  $W_0$  is work function.  
 $E - eV_0 = W_0$  where  $V_0$  is stopping potential  
 $6 \times 10^{-19} - (1.6 \times 10^{-19}) \times (2.2) = W_0$   
 $6 \times 10^{-19} - 3.52 \times 10^{-19} = W_0$   
 $W_0 = 2.48 \times 10^{-19} \text{ Joules}$   
 $W_0 = \frac{2.48 \times 10^{-19}}{1.6 \times 10^{-19}} \text{ eV}$   
 $W_0 = 1.55 \text{ eV}$

*Probabilities in Physics* Claus Beisbart, Stephan Hartmann, 2011-09-15 Many results of modern physics those of quantum mechanics for instance come in a probabilistic guise But what do probabilistic statements in physics mean Are probabilities matters of objective fact and part of the furniture of the world as objectivists think Or do they only express ignorance or belief as Bayesians suggest And how are probabilistic hypotheses justified and supported by empirical evidence Finally what does the probabilistic nature of physics imply for our understanding of the world This volume is the first to provide a philosophical appraisal of probabilities in all of physics Its main aim is to make sense of probabilistic statements as they occur in the various physical theories and models and to provide a plausible epistemology and metaphysics of probabilities The essays collected here consider statistical physics probabilistic modelling and quantum mechanics and critically assess the merits and disadvantages of objectivist and subjectivist views of probabilities in these fields In particular the Bayesian and Humean views of probabilities and the varieties of Boltzmann's typicality approach are examined The contributions on quantum mechanics discuss the special character of quantum correlations the justification of the famous Born Rule and the role of probabilities in a quantum field theoretic framework Finally the connections between probabilities and foundational issues in physics are explored The Reversibility Paradox the notion of entropy and the ontology of quantum mechanics are discussed Other essays consider Humean supervenience and the question whether the physical world is deterministic
