NASA Technical Paper, 1989 Cooperative Task-Oriented Computing Chryssis Georgiou, Alexander Shvartsman, 2022-06-01 Cooperative network supercomputing is becoming increasingly popular for harnessing the power of the global Internet computing platform A typical Internet supercomputer consists of a master computer or server and a large number of computers called workers performing computation on behalf of the master Despite the simplicity and benefits of a single master approach as the scale of such computing environments grows it becomes unrealistic to assume the existence of the infallible master that is able to coordinate the activities of multitudes of workers Large scale distributed systems are inherently dynamic and are subject to perturbations such as failures of computers and network links thus it is also necessary

to consider fully distributed peer to peer solutions We present a study of cooperative computing with the focus on modeling distributed computing settings algorithmic techniques enabling one to combine efficiency and fault tolerance in distributed systems and the exposition of trade offs between efficiency and fault tolerance for robust cooperative computing The focus of the exposition is on the abstract problem called Do All and formulated in terms of a system of cooperating processors that together need to perform a collection of tasks in the presence of adversity Our presentation deals with models algorithmic techniques and analysis Our goal is to present the most interesting approaches to algorithm design and analysis leading to many fundamental results in cooperative distributed computing The algorithms selected for inclusion are among the most efficient that additionally serve as good pedagogical examples Each chapter concludes with exercises and bibliographic notes that include a wealth of references to related work and relevant advanced results Table of Contents Introduction Distributed Cooperation and Adversity Paradigms and Techniques Shared Memory Algorithms Message Passing Algorithms The Do All Problem in Other Settings Bibliography Authors Biographies

C in a Nutshell Peter Prinz, Tony Crawford, 2005-12-16 Learning a language any language involves a process wherein you learn to rely less and less on instruction and more increasingly on the aspects of the language you've mastered Whether you're learning French Java or C at some point you'll set aside the tutorial and attempt to converse on your own It's not necessary to know every subtle facet of French in order to speak it well especially if there's a good dictionary available Likewise C programmers don't need to memorize every detail of C in order to write good programs What they need instead is a reliable comprehensive reference that they can keep nearby C in a Nutshell is that reference This long-awaited book is a complete reference to the C programming language and C runtime library Its purpose is to serve as a convenient reliable companion in your day-to-day work as a C programmer C in a Nutshell covers virtually everything you need to program in C describing all the elements of the language and illustrating their use with numerous examples The book is divided into three distinct parts The first part is a fast-paced description reminiscent of the classic Kernighan it includes an overview of the contents of the standard headers and a description of each standard library function Part III provides the necessary knowledge of the C programmer's basic tools the compiler the make utility and the debugger The tools described here are those in the GNU software collection C in a Nutshell is the perfect companion to K&R and destined to be the most reached-for reference on your desk
