

Name: _____ Piecewise Functions Pumpkin Project

Objective: To write piecewise functions for each "part" of the pumpkin.

Requirements:

There must be at least 20 segments with equations.

- Equations are written in slope-intercept form.
- Restrictions must be listed in correct order.
- When writing restrictions for closed ends, use $x \leq$ or $x \geq$.
- When writing restrictions for open ends, use $x <$ or $x >$.

The following segment types must be included:

- 1 piece of horizontal segments.
- 1 piece that is neither vertical nor horizontal.
- The rest of the pieces must include open and closed endpoints.

Choose one of the three options to do the project:

- Option 1: Use the pumpkin worksheet as the face, write the restrictions on the face, and write the equations on the back.
- Option 2: Create a different pumpkin worksheet except I will create the template for a pumpkin of another size.
- Option 3: Create the pumpkin of the segments and write the equations on the back and the same on the front.

Attached to the end of the worksheet is a graphing calculator template. Students can use this to graph their piecewise functions.

Teacher Page: Outline of option 1

This is the outline of the suggested pumpkin. Remember, students can write the equations in several ways and the student version will have a face.

Modern Algorithms for Image Processing Vladimir Kovalevsky, 2018-12-10 Utilize modern methods for digital image processing and take advantage of the many time saving templates provided for all of the projects in this book Modern Algorithms for Image Processing approaches the topic of image processing through teaching by example Throughout the book you will create projects that resolve typical problems that you might encounter in the world of digital image processing Some projects teach you methods for addressing the quality of images such as reducing random errors or noise and suppressing pulse noise salt and pepper a method valuable for improving the quality of historical images Other methods detail how to correct inhomogeneous illumination not by means of subtracting the mean illumination but through division a far more efficient method Additional projects cover contrasting and a process for edge detection more efficient than Canny's for detecting edges in color images directly without converting them into black and white images What You'll Learn Apply innovative methods for suppressing pulse noise enhancing contrast and edge detection Know the pros and cons of enlisting a particular method Use new approaches for image compression and recognizing circles in photos Utilize a valuable method for straightening photos of paintings taken at an oblique angle a critical concept to understand when using flash at a right angle Understand the problem statement of polygonal approximation of boundaries or edges and its solution Use a new method for detecting bicycles in traffic Access complete source code examples in C for all of the projects Who This Book Is For C developers who work with digital image processing or are interested in informatics The reader should have programming experience and access to an integrated development environment IDE ideally NET This book does not prove or disprove theorems but suggests methods for learning valuable concepts that will enable you to customize your own image processing projects

Discovering Wavelets Edward Aboufadel, Steven Schlicker, 2011-02-14 An accessible and practical introduction to wavelets With applications in image processing audio restoration seismology and elsewhere wavelets have been the subject of growing excitement and interest over the past several years Unfortunately most books on wavelets are accessible primarily to research mathematicians Discovering Wavelets presents basic and advanced concepts of wavelets in a way that is accessible to anyone with only a fundamental knowledge of linear algebra The basic concepts of wavelet theory are introduced in the context of an explanation of how the FBI uses wavelets to compress fingerprint images Wavelet theory is further developed in the setting of function spaces The book then moves on to present more advanced topics such as filters multiresolution analysis Daubechies wavelets and further applications The book concludes with a series of projects and problems that introduce advanced topics and offer starting points for research Sample projects that demonstrate real wavelet applications include image compression a wavelet based search engine processing with Daubechies wavelets and more Among the special features of Discovering Wavelets are Real life hands on examples that involve actual wavelet applications A companion Web site containing Pixel Images software and Maple files to be used with the projects in the book Challenging

profitability with great surface finish has made the need of utilizing top notch machining instrument. The significant cutting parameters in confronting process chiefly cutting speed, feed rate, depth of cut influence the Tool life and Production time of the completed material. This paper reviews the streamlining of cutting parameters in confronting process utilizing Taguchi method. An exceptionally structured symmetrical exhibit of Taguchi is utilized to examine the impact of slicing parameters through the modest number of analyses. Taguchi technique is an integral asset of improvement. ANOVA is utilized to discover which input parameters altogether influence the execution attributes. Sign to Noise S/N proportion is utilized to gauge the varieties of test information.

1 INTRODUCTION Turning is a machining procedure used to get the ideal element of round metal. The primary objective in present mechanical period is to create minimal effort quality item with required measurements in an optimum time. Therefore the optimum cutting parameters are to be perceived first. In turning the metal is in rotational movement and a cutting tool is utilized to shear away the undesired metals. This procedure requires lathe machine or turning machine, cutting tool, work piece and fixture. The work piece is fixed in the machine chuck and is pivoted at rapid. The cutting tool is taken care of in corresponding to the hub of turn. During this machining procedure the cutting parameters profoundly relies on the work piece, cutting tool material and so on. These are dictated by understanding or machine catalogue. Surface roughness, Tool life and machining time is a widely used attribute of product quality and in most cases a technical necessity for mechanical products. Thus the optimum selection of cutting parameters such as feed rate, depth of cut, cutting speed etc generates optimum conditions during machining and becomes the main exigency of manufacturing industry. Surface roughness, Tool life and machining time is an important criterion to find the quality of a surface. It is an important response parameter. In machining process various parameters are Input Parameters: Cutting speed, Feed rate, Depth of cut, Insert radius, Cutting fluid etc. Output Parameters: surface roughness, Tool life and machining time.
