Title 14 of the Code of Federal Regulations 14CFR Part I This chapter provides a brief introduction to the structure of
aircraft and uses an airplane for most illustrations Light Sport Aircraft LSA such as wight shift control balloon glider
powered parachute and gyroplane have their own handbooks to include detailed information regarding aerodynamics and
control Chapter 3 Principles of Flight This chapter examines the fundamental physical laws governing the forces acting on an
aircraft in flight and what effect these natural laws and forces have on the performance characteristics of aircraft To control
an aircraft be it an airplane helicopter glider or balloon the pilot must understand the principles involved and learn to use or
counteract these natural forces Chapter 4 Aerodynamics of Flight This chapter discusses the aerodynamics of flight how
design weight load factors and gravity affect an aircraft during flight maneuvers The four forces acting on an aircraft in
straight and level unaccelerated flight are thrust drag lift and weight Chapter 5 Flight Controls This chapter focuses on the
flight control systems a pilot uses to control the forces of flight and the aircraft s direction and attitude It should be noted
that flight control systems and characteristics can vary greatly depending on the type of aircraft flown The most basic flight
control system designs are mechanical and date to early aircraft They operate with a collection of mechanical parts such as
rods cables pulleys and sometimes chains to transmit the forces of the flight deck controls to the control surfaces Chapter 6
