A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie

McDougall-Waters,Camilla Mørk Røstvik,2022-10-03 Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours Scientific journals are now central to academic research and careers Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published The journal that reported Newton's optical experiments still exists First published in 1665 and now fully digital the Philosophical Transactions has carried papers by Charles Darwin Dorothy Hodgkin and Stephen Hawking It is now one of eleven journals published by the Royal Society of London Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing The editorial management business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history

American Silent Horror, Science Fiction and Fantasy Feature Films, 1913-1929 John T. Soister, Henry Nicolella, Steve Joyce, 2014-01-10 During the Silent Era when most films dealt with dramatic or comedic takes on the boy meets girl boy loses girl theme other motion pictures dared to tackle such topics as rejuvenation revivication mesmerism the supernatural and the grotesque A Daughter of the Gods 1916 The Phantom of the Opera 1925 The Magician 1926 and Seven Footprints to Satan 1929 were among the unusual and startling films containing story elements that went far beyond the realm of highly unlikely Using surviving documentation and their combined expertise the authors catalog and discuss these departures from the norm in this encyclopedic guide to American horror science fiction and fantasy in the years from 1913 through 1929

The Accelerating Transport Innovation Revolution George Giannopoulos, John F. Munro, 2019-04-17 The Accelerating Transport Innovation Revolution A Global Case Study based Assessment of Current Experience Cross sectorial Effects and Socioeconomic Transformations offers a comprehensive view of current state of the art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results It offers a fascinating new model of the innovation process based on theories of biological ecosystems general systems theory and basins of attraction represented through space time graphs well known in mathematics Furthermore it considers through a number of dedicated chapters key issues and elements of innovation ecosystems such as Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems Chapter 4 Review of innovation

organization and governance in key countries and regions Chapter 5 the role of technological Spillovers Chapter 6 Collection and use of data for innovation monitoring and benchmarking Chapter 7 Intellectual Property protection between competing ecosystems Chapter 8 Economics of innovation Chapter 9 Public and private sector involvement in Transport innovation creation Chapter 10 the role of the individual entrepreneur innovator in energizing change Chapter 11 Finally in Chapter 12 there is a thorough summary of key findings This book uses a paradigmatic approach to augment the innovation ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model It therefore includes ten case studies from the U S Europe and Asia detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned It does this effectively at five different levels of analysis i e the individual innovator entrepreneur level the organization level government agency or company the regional ecosystem level the nation state level and the global systemic or international level Each level of analysis reveals unique features of the innovation landscape and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation especially on a revolutionary scale The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years especially in the public sector there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large scale revolutionary change as the future unfolds Thus a primary theme of the book is that understanding how research results translate into market innovation and implementation especially understanding the nature of revolutionary innovation is as important as the creation of innovations themselves While the focus of the book is on Transportation the concepts and recommendations presented apply to other fields too

Cancer, Radiation Therapy, and the Market Barbara Bridgman Perkins, 2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggeringly high costs and debts Was speculation like this new to health care *Cancer Radiation Therapy and the Market* shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health
