

3. In a certain country, income tax is assessed by using the function below, where $f(x)$ is the percentage of the income that must be paid as tax, and x is the amount of income.

$$f(x) = \begin{cases} 0 & \text{if } x \leq \$15,000 \\ 12\% & \text{if } \$15,000 < x \leq \$30,000 \\ 18\% & \text{if } x > \$30,000 \end{cases}$$

- If your income is \$28,000, what amount of tax will you pay? $.12(28000) = \$3360$
- If your income is \$14,500, what amount of tax will you pay? 0
- Your income last year was \$25,000 and your friend's income was \$32,000. How much more did your friend pay in taxes than you?
 $(25,000) \cdot .12 = 3000$
 $32000 \cdot (.18) = 5760$
 $5760 - 3000 = \$2760$

4. You are buying t-shirts for the math club members. The t-shirt company will charge you according to the function below, where $c(x)$ is the total cost of the shirts and x is the number of t-shirts that you order.

$$f(x) = \begin{cases} 12x & 0 < x \leq 10 \\ 10x & 11 \leq x \leq 50 \\ 8x & x > 50 \end{cases}$$

- If you can get 51 members of the math club, how much will the 51 t-shirts cost? $8(51) = \$408$
- If you only have 5 members (sad!), how much will EACH t-shirt cost? $\$12$
- You end up with 30 members who want to buy a t-shirt. You want to sell the shirts and end up making \$100 profit for an end-of-year party. How much should you sell each shirt for?
 $10(30) = 300$
 $300 + 100 = 400$
 $400 \div 30 = \$13.34$

Mathematical Modelling for Teachers Jürgen Maaß, Niamh O'Meara, Patrick Johnson, John O'Donoghue, 2018-10-01

While there are many areas of focus in mathematics education there are many good reasons for offering applicable mathematics education in schools Let us just mention two of the most important reasons On the one hand a focus on the practical side of mathematics presents a convincing and motivating answer to the typical student question Why study mathematics On the other hand education policy seems inclined to move in this direction by implementing international testing curricula and catalogues of skills The most important feature of this book is that the authors speak directly to you the mathematics teachers The authors attempt to draw you into a continuous dialogue about activities you are asked to engage in as learners You are asked to do something and through doing and reflecting you will gain first hand experience of new approaches and materials In this way you can learn to teach applicable mathematics to your students using your own experience as learners of applicable mathematics motivated and supported by the book Here applicable mathematics education is the phrase we use to describe reality based mathematics education Reality based mathematics relies heavily on problem solving and a positive disposition to engage with mathematics Modelling reality and simulating selected aspects of reality are other pillars of reality based mathematics education **Let's Review Regents: Algebra I, Fourth Edition**

When the Tyrian princess Dido landed on the North African shore of the Mediterranean sea she was welcomed by a local chieftain He offered her all the land that she could enclose between the shoreline and a rope of knotted cowhide While the legend does not tell us we may assume that Princess Dido arrived at the correct solution by stretching the rope into the shape of a circular arc and thereby maximized the area of the land upon which she was to found Carthage This story of the founding of Carthage is apocryphal Nonetheless it is probably the first account of a problem of the kind that inspired an entire mathematical discipline the calculus of variations and its extensions such as the theory of optimal control This book is intended to present an introductory treatment of the calculus of variations in Part I and of optimal control theory in Part II The discussion in Part I is restricted to the simplest problem of the calculus of variations The topic is entirely classical all of the basic theory had been developed before the turn of the century Consequently the material comes from many sources however those most useful to me have been the books of Oskar Bolza and of George M Ewing Part II is devoted to the elementary aspects of the modern

extension of the calculus of variations the theory of optimal control of dynamical systems
