

6. The goal of this project was to determine if the air pressure of the tires on a dirt bike affects the stopping distance of the vehicle. I predicted that as the air pressure in a tire decreases the stopping distance would decrease. Additionally, I thought that as the pressure increases, the stopping distance would increase as well. The dirt bike rider accelerated to a speed of 4 km/hr and at a predetermined point, applied the brakes. The stopping distance was measured, recorded, and averaged. 10 trials were done at tire pressures of 10 psi, 12 psi, 15 psi (recommended on the tire), 17 psi and 20 psi. Psi stands for "pounds per square inch". The table summarizes the results of my tests.

Tire Pressure	Average Stopping Distance (meters)
10 psi	1.2 m
12 psi	1.5 m
15 psi	1.6 m
17 psi	1.8 m
20 psi	2.2 m

From my experiment I found that the best tire pressure for stopping distance was 15 psi.

- a) What was the research question/problem? Does air pressure of the tires affect the stopping distance of a dirt bike?
- b) What is the investigator's hypothesis? As air pressure decreases, the stopping distance would also decrease.
- c) What is the Independent Variable? Tire Pressure
- d) How many levels of the Independent Variable were used? 5 Levels
What others, if any? 10 psi, 12 psi, 15 psi, 17 psi, 20 psi
- e) What is the Dependent Variable? Stopping Distance
- f) What is the Control? 15 psi (it is recommended on these tires)
- g) What were 3 constants throughout this test?
Always traveling at the same speed
Always applied the brakes at the same place
Distances were always measured in m
- h) How many trials were performed for each level of Independent Variable? 10
