**EXERCISE 35 PROBLEMS—PART III**

The following questions are based on Map T-2, the "Umnak, Alaska," topographic map (scale 1:250,000; contour interval 200 feet). In this problem, you will estimate the height of the original Okmok volcano before the caldera was formed. (You may also determine the elevation changes and distances needed to make these calculations by using Google Earth™.)

Gradients can be used to estimate an elevation increase over a given distance. (See Exercise 34 for a review of gradients.) For example, if a mountain has a gradient of 1000 feet per mile, we can estimate that over a horizontal distance of five miles, the elevation will increase by 5000 feet.

$$5 \text{ miles} \times 1000 \text{ ft/mi} = 5000 \text{ foot elevation increase over five miles}$$

1. Compute the gradient of the outer base of the Okmok Caldera along line EF. Use the coastline closest to Point E as the starting point for measuring horizontal distance, and the northwest rim of the caldera as the stopping point. It may be easiest to use the graphic map scale to measure out a distance of four or five miles, and then determine the elevation change over that distance.

$$\frac{\text{Elevation Change (feet)}}{\text{Number of Miles (miles)}} = \text{Gradient (feet/mile)}$$

2. Estimate the height of the original volcano. Assume that the present gradient of the Okmok Caldera (calculated in problem 1) is the same as that of the volcano before it collapsed. Given the complex history of the Okmok Caldera, this is a very simplistic assumption, but it can be used to provide a crude estimate of the volcano's previous height.
  - (a) Following line EF, what is the horizontal distance from the coastline (closest to Point E) to the center of the caldera? 8.2 miles
  - (b) Multiply the horizontal distance (from problem 2a) by the gradient of the present caldera (problem 1). This is an estimate of the original elevation of the volcano before its collapse. 4100-5945 feet
  - (c) Approximately how much higher was the original volcano than the present caldera rim? 1560 feet

**EXERCISE 35 PROBLEMS—PART IV—GOOGLE EARTH™**

Go to the Hess *Physical Geography Laboratory Manual*, 12th edition, website at [www.MasteringGeography.com](http://www.MasteringGeography.com) and open the KMZ file for Exercise 35 Part IV, or scan the QR (Quick Response) code for this exercise to view the "Exercise 35 Part IV Google Earth™ video." Using the measurement and elevation functions in Google Earth™ and the same calculation procedures as in Part III, estimate the original height of Mount Mazama before it collapsed to form the Crater Lake caldera (this will provide only a crude estimate of the height of the original volcano).

1. Gradient of southern slope of Crater Lake caldera: \_\_\_\_\_ feet/mile
2. Approximately \_\_\_\_\_ feet higher than present Mount Mazama
