**Big Idea Question:** How is thermal energy transferred through radiation?

Radiation is the only way of transferring thermal energy that does not require matter. Radiation travels through electromagnetic waves. When the waves hit the object, it transfers its energy to the object causing the particles to increase their kinetic energy.

The sun passes the Earth through radiation. The light energy from the sun comes in direct contact with the particles in the atmosphere and the particles on land. This increases their kinetic energy. There is a reason summer temperatures are hotter than winter temperatures, due to the angle of the Sun. More light rays can reach the Earth in summer and stay for a longer time. This increases the amount of thermal energy being transferred from the sun to the Earth through radiation.

**Electromagnetic Radiation**

Radiation is also from the Sun that reaches the atmosphere and causes the particles to increase their kinetic energy. This, in turn, causes the atmosphere to heat up.
